All rights reserved. Please do not start if you have low self-esteem or confidence issues. Your information and uploaded photos are not saved or shared. Results are based on complex mathematical calculations performed by a blind computer beauty calculator and could be incorrect. PrettyScale measures the face beauty by studying and testing the placement and sizes of different face features. The results are based on the face shape, distance between eyes and lips, mouth size and face symmetry. Sometimes golden ratio is also used in determining the results. Results can be different based on how you place lines and dots on your face according to instructions. Am I Pretty? Analyze my face! What is the unit of beauty? Helen is considered the unit for measuring beauty. It is a humorous unit based on the story of Helen of Troy (or Helen of Sparta). She was the daughter of Zeus and Leda. In Greek myths she was considered the most beautiful woman in the world. She had a face that lauched a thousand ships. So one Helen means a face that can launch a thousand ships. Helen is a very big unit and in practice a smaller unit micro Helen is used. On prettyscale.com if your face gets 80% score that means 80 micro Helen. Am I Pretty Upload your photo and let our AI analyze your face in seconds! Utilizes cutting-edge artificial intelligence to provide accurate facial symmetry assessments. Get your facial symmetry score and detailed analysis within seconds of uploading your photo. Receive a detailed breakdown of your facial features' symmetry, including eyes, nose, mouth, and overall balance.
