The following table shows the symbolic constant names, decimal values, and mouse or keyboard equivalents for the virtual-key codes used by the system. The codes are listed in numeric order. General key code list

Key	Key Code	Description
Back	8	The BACKSPACE key
Tab	9	The TAB key
Enter	13	The ENTER key
Shift	16	The SHIFT key
Control	17	The CTRL key
Menu	18	The ALT key
Pause	19	The PAUSE key
Caps Lock	20	The CAPS LOCK key
Escape	27	The ESC key
Space	32	The SPACEBAR key
Page Up	33	The PAGE UP key
Page Down	34	The PAGE DOWN key
End	35	The END key
Home	36	The HOME key
Left	37	The LEFT ARROW key
Up	38	The UP ARROW key
Right	39	The RIGHT ARROW key
Down	40	The DOWN ARROW key
Select	41	The SELECT key
Print	42	The PRINT key
Execute	43	The EXECUTE key
Print Screen	44	The PRINT SCREEN key
Insert	45	The INS key
Delete	46	The DEL key
Help	47	The HELP key
0	48	The 0 key
1	49	The 1 key
2	50	The 2 key
3	51	The 3 key
4	52	The 4 key
5	53	The 5 key
6	54	The 6 key
7	55	The 7 key
8	56	The 8 key
9	57	The 9 key
A	65	The A key
B	66	The B key
C	67	The C key
D	68	The D key
E	69	The E key
F	70	The F key
G	71	The G key
H	72	The H key
I	73	The I key
J	74	The J key
K	75	The K key
L	76	The L key
M	77	The M key
N	78	The N key
O	79	The O key
P	80	The P key
Q	81	The Q key
R	82	The R key
S	83	The S key
T	84	The T key
U	85	The U key
V	86	The V key
W	87	The W key
X	88	The X key
Y	89	The Y key
Z	90	The Z key
LWin	91	The left Windows logo key
RWin	92	The right Windows logo key
Apps	93	The application key
Sleep	95	The computer sleep key
NumPad	96	The 0 key on the numeric keypad
NumPad	197	The 1 key on the numeric keypad
NumPad	198	The 2 key on the numeric keypad
NumPad	199	The 3 key on the numeric keypad
NumPad	200	The 4 key on the numeric keypad
NumPad	201	The 5 key on the numeric keypad
NumPad	202	The 6 key on the numeric keypad
NumPad	203	The 7 key on the numeric keypad
NumPad	204	The 8 key on the numeric keypad
NumPad	205	The 9 key on the numeric keypad
NumPad	206	The multiply key
NumPad	207	The divide key
NumPad	208	The add key
NumPad	209	The subtract key
NumPad	210	The decimal key
NumPad	211	The divide key
NumPad	212	The F1 key
NumPad	213	The F2 key
NumPad	214	The F3 key
NumPad	215	The F4 key
NumPad	216	The F5 key
NumPad	217	The F6 key
NumPad	218	The F7 key
NumPad	219	The F8 key
NumPad	220	The F9 key
NumPad	221	The F10 key
NumPad	222	The F11 key
NumPad	223	The F12 key
NumPad	224	The F13 key
NumPad	225	The F14 key
NumPad	226	The F15 key
NumPad	227	The F16 key
NumPad	228	The F17 key
NumPad	229	The F18 key
NumPad	230	The F19 key
NumPad	231	The F20 key
NumPad	232	The F21 key
NumPad	233	The F22 key

Check out the complete event log on the console (F12).Show less On Windows, some characters without a dedicated key can be entered using the Alt + Numpad or Alt Code input method.This is done by pressing and holding the Alt key while typing a number that identifies the character, using the keyboard's numeric keypad, then releasing Alt.While this method only works on Windows, a similar method is available in most Unix or Unix-like OSs by holding down Ctrl + Shift + U, releasing them, then typing the hex number of an Unicode character and finally pressing the Spacebar or Enter key.When using virtual/mobile keyboards, formally known as IME (Input-Method Editor), the W3C standard states that a KeyboardEvent's e.keyCode should be 229 and e.key should be "Unidentified". However, Key.js will soon infer those values from other events so that you can use the App even on your phone! Double-click a value to copy. Check out the complete event log on the console (F12).Show more ASCII codes for the Enter key / Carriage Return (CR). ASCII codes for Enter / CR CR decimal code: 1310 CR hex code: 0D16 CR binary code: 000011012 CR octal code: 158 CR escape sequence: \x0D CR HTML code: See also Write how to improve this page HTML Meaning ↵U+21B5 Enter SymbolThis symbol is used to indicate an enter operation, commonly found in computing to represent a carriage return or the function of the enter key on a keyboard. ↵U+23CE Enter Key SymbolRepresents the enter or return key on a keyboard, used to execute commands or input text. The Enter Symbol, denoted as ↵, is widely used in computing to denote the action performed by the enter or return key on a keyboard. This key is essential for various operations such as submitting data, executing commands, or inserting a new line in text environments. It's also referred to as the "return key" in some contexts, highlighting its function of returning the cursor to the beginning of the next line or executing a command in a software application. Interestingly, there are two types of "enter" actions in some text editors and word processors: the standard enter (or return), and "Shift + Enter." The latter is often used to insert a soft return or line break, which moves the cursor to the next line without creating a new paragraph or submitting a form. This distinction allows for more nuanced control over text formatting and command execution. How to Type the Enter Symbol Using Keyboard Shortcuts, Alt Codes, and Unicode Windows: Most keyboards do not have a direct key for typing the Enter Symbol. It's often used symbolically in diagrams or designs rather than in text. Mac: Similar to Windows, the Enter Symbol is typically used for symbolic purposes and may not have a direct typing method. Unicode: The Unicode for the Enter Symbol is U+21B5. It can be inserted in some applications by typing "21B5" and then pressing Alt+X in Windows. HTML: Use ↵ to insert the Enter Symbol in web content. Symbols' Images
