you're human

Hi BertBrinkman, Thanks for reaching out to Apple Support Communities. It sounds like you're having an issue with printing double-sided pages from your iPhone. We're happy to help.First, we recommend ensuring your iPhone is running the latest iOS version. If needed, the article here can help: Update your iPhone, iPad, or iPod touchAdditionally, we recommend checking to see if the issue is related to a specific webpage, document, or any content you attempt to print. Also, when viewing the settings be sure the Summary shows double-sided printing is enabled. This article has a great visual: Use AirPrint to print from your iPhone, iPad, or iPod touchIf the issues continue, completing a nba final restart of both your printer and iPhone may help. Restoring your iPhone doesn't have to be a hassle. With just a few taps, you can send documents, photos, and webpages from your phone to a printer. Whether you're at home or in the office, follow these steps to print wirelessly using AirPrint, a built-in printing solution for iOS devices. Before we dive into the steps, it's important to note that you'll need an AirPrint-enabled printer for this process. Most modern printers support AirPrint, but it's always good to check if your printer is compatible. Once you've confirmed that your printer supports AirPrint, follow these steps to print from your iPhone. Make sure your iPhone and your AirPrint-enabled printer are connected to the same Wi-Fi network. Being on the same Wi-Fi network is crucial for AirPrint to work. If you're not sure how to connect your printer to Wi-Fi, consult the printer's manual or look up instructions online. Open the app that contains the document, photo, or webpage you want to print. You can print from apps like Photos, Mail, Safari, and more. If the app has a share or print option, you're good to go. Tap the Share icon or the Print option, which might be located under the Share menu in some apps. The Share icon usually looks like a square with an upward arrow. In some apps, you might have to tap on other icons, like the Reply or Options icon, to find the Print option. In the Share menu, scroll down and tap on Print. If you don't see the Print option, the app might not support AirPrint. However, most native Apple apps and many third-party apps do support it. Select your printer from the list, choose the number of copies, and any other options, then tap Print. Some printers might offer additional settings, like color options or double-sided printing. Customize these settings to your liking before sending the job to the printer. After completing these steps, your iPhone will send the print job to the printer, and your document or photo should print out shortly. It's as simple as that! Make sure your printer firmware is up-to-date for the best printing experience. If you can't find your printer, ensure it's turned on and not in sleep mode. Check if there are any printer-specific apps available that offer extended functionalities. You can cancel a print job from the App Switcher by tapping the Print Center and then Cancel Printing. For webpages, use Reader Mode in Safari for a cleaner printout without ads and unnecessary clutter. Most modern printers come with AirPrint compatibility. Check your printer's specifications or look for the AirPrint logo on the packaging. Not all apps support AirPrint, but many do. Look for the Share or Print option within the app. Make sure your printer and iPhone are connected to the same Wi-Fi network. If they are, try turning the printer off and on again. Yes, if your printer supports it, you can choose black and white in the printer options before tapping Print. Yes, if your printer has double-sided printing capabilities, you'll find the option in the printer settings when you select Print. Connect to Wi-Fi Select the content to print Tap the Share icon Select Print Choose printer and settings Printing from your iPhone is a breeze once you get the hang of it. With AirPrint technology, Apple has made it incredibly easy to print documents, photos, and webpages without the need for drivers or cables. Just a few taps and you're on your way to a printed page. Remember to keep your printers' firmware up to date to ensure compatibility and access to all the latest features. Also, don't forget that while most apps support AirPrint, not all do, so always check for the print option before getting started. Now that you know how to print from your iPhone, you can share physical copies of your digital world with ease. Happy printing!Matthew Burleigh has been writing tech tutorials since 2008. His writing has appeared on dozens of different websites and been read over 50 million times.After receiving his Bachelors and Masters degrees in Computer Science he spent several years working in IT management for small businesses. However, he now works full time writing content online and creating websites.His main writing topics include iPhones, Microsoft Office, Google Apps, Android, and Photoshop, but he has also written about many other tech topics as well.Read his full bio here. Printing double-sided documents from an iPhone is a straightforward process, thanks to the built-in capabilities of iOS and the wide range of printers that support AirPrint. Double-sided printing, also known as duplex printing, saves paper and is an eco-friendly choice. Below is a detailed guide on how to print double-sided from your iPhone. Before you can print double-sided, ensure that your printer is AirPrint-compatible. Most modern printers offer this feature, allowing you to print wirelessly from your iPhone. You can check the printer's manual or the manufacturer's website for AirPrint support. For your iPhone to communicate with your printer, both devices need to be connected to the same Wi-Fi network. To check your iPhones Wi-Fi connection: Open Settings. Tap Wi-Fi. Ensure you are connected to your home or office Wi-Fi network. Open the document you want to print. This could be a PDF, a photo, or any other compatible file. You can access documents from various apps, such as: Files: For PDFs and documents saved on your iPhone or iCloud Drive. Photos: For images stored in your photo library. Mail: If you want to print an attachment. Once you have your document open: Tap the Share icon (a square with an arrow pointing upward). This icon is usually found at the bottom of the screen for most apps. Scroll through the options and select Print. In the Print menu, you will see a list of available printers. If your printer is AirPrint-compatible, it should appear in this list. Tap on the printer you wish to use. Before printing, you can specify the number of copies you want to print. You can do this in the same print menu where you selected the printer. To print double-sided, look for the option that says Options (it might appear as Double-Sided or Duplex). Heres how to enable it: Tap on Options. Find the Double-Sided toggle and switch it on. Some printers may have variations like Print on Both Sides or Duplex Printing. You may also be prompted to choose between Long Edge or Short Edge binding, which determines how the pages will flip. After you have set your preferences, review the print settings. Ensure everything is correct, including the printer, number of copies, and double-sided option. Once you're satisfied: Tap Print in the upper-right corner of the screen. Your document will be sent to the printer. If you encounter any issues while printing: Printer Not Found: Ensure your printer is turned on and connected to the same Wi-Fi network as your iPhone. Double-Sided Option Missing: If the double-sided option isn't available, check your printer settings. Some printers may not support duplex printing for certain file types or sizes. Low Ink or Paper: Make sure your printer has enough paper and ink for the print job. Printing documents and streaming your printing process. With just a few taps, you can print documents, photos, and more while minimizing paper waste. This feature is a game-changer for anyone looking to reduce their carbon footprint. Always ensure your printer is compatible with AirPrint and configured correctly to enjoy seamless printing from your device. Whether you're preparing documents for a meeting, printing photos, or creating handouts, double-sided printing offers a sustainable and professional solution. Page content loaded Dec 13, 2011 4:18 AM in response to patrickfromkildere If your printer doesn't do two sided printing (most don't) print the odd pages first, then flip the paper over and print the even pages. You will have to experiment to see how to flip the paper! do it by printing page 1, then flipping page one over and putting it back into the paper tray.Then i print pages 2 and 3.Remove the completed page 1 and 2.Flip page 3 over and print pages 4 and 5.Repeat the process until you are done. Dec 12, 2011 8:19 PM in response to patrickfromkildere You need to set up your printer's options and features when you set up the printer in Print & Fax or Print & Scan if you're running Lion.No information just leads to no answers. Dec 12, 2011 3:46 PM in response to patrickfromkildere What type of printer are you using? It is probably in your printer settings, find the printer settings and see if it is turned on or not. You do not necessarily need to use a computer for printing photos, e-mails, Web pages, and other documents. AirPrint enables you to wirelessly print from Apple devices such as iPad, iPhone, iPod touch, and Macintosh without using the printer driver. To use AirPrint, you need one of the following devices with the latest version of iOS: iPad (all models) iPhone (3GS or later) iPod touch (3rd generation or later) If you use Macintosh, OS X v10.7 or later is required. Apple devices (iPad/iPhone/iPod touch/Macintosh) and the machine must be connected to the same LAN. 1. Make sure that the machine is turned ON and is connected to the LAN. 2. From the application on your Apple device, tap to display the menu options. Icon shape differs depending on the application that you are using. 3. From the drop-down list, tap [Print]. 4. Select this machine from [Printer] in [Printer Options]. The printers connected to the network are displayed. Select this machine in this step. [Printer Options] is not supported on applications that do not support AirPrint. You cannot print by using those applications. 5. Specify the print settings as necessary. Number of copies[Tap [+1] or [-1] on the right side of [1] Copy] to set the number of copies. [Double-sided] [MF229dw / MF226dn]Tap [ON] on the right side of [Double-sided] to specify 2-sided printing. [Range]Tap [Range] and [All Pages] or specify the range of the pages to print when printing a document with multiple pages. The available settings on [Printer Options] differ depending on the application you are using. Available paper sizes differ depending on the application you are using. 6. Tap [Print]. Printing starts. To cancel printing Canceling AirPrint Printing Checking the print status During the printing process, the [Print Center] icon is displayed in the list of recently used applications on the Apple device, and you can use it to check the print status. To display the list of recently used applications, press the [Home] button twice. 1. Add the machine to your Macintosh with [System Preferences][Print & Scan]. 2. Make sure that the machine is turned ON and is connected to the LAN. 3. Open a document in an application and display the print dialog box. How to display the print dialog box differs for each application. For more information, see the instruction manual for the application you are using. 4. Select this machine in the print dialog box. The printers connected to your Macintosh are displayed. Select this machine in this step. 5. Specify the print settings as necessary. [Presets]Specify the print settings by selecting a preset setting from the drop-down list. [Copies]Specify the number of copies. [Two-Sided] [MF229dw / MF226dn]Select the check box to make 2-sided printouts. [Pages]Specify the range of the pages to print when printing a document with multiple pages. The available settings differ depending on the application you are using. 6. Click [Print]. Printing starts. To cancel printing Canceling AirPrint Printing You have two options to cancel printing. You can cancel printing from the operation panel of the machine (Canceling Prints), or from an Apple device with the following procedure. 1. Press the [Home] button twice. 2. Tap [Printer Center] to display the list of the documents to be printed. 3. Tap the document you want to cancel, and tap [Cancel Printing]. 1. Click the printer icon that is displayed in the Dock on the desktop. 2. Click the document you want to cancel. 3. Click [Delete]. You can register information, including the name of the machine and installation location, that is used for identifying the machine. You can also disable the AirPrint function of the machine. Use the Remote UI to change these settings. 1. Start the Remote UI and log on in System Manager Mode. Starting Remote UI Depending on your Web browser, the procedure to start the Remote UI may be different. See the instruction manuals for the Web browser you are using. 2. Click [Settings/Registration]. If you are using a mobile device, such as iPad, iPhone, or iPod touch, read "click" as "tap" in this section. 3. Click [Network Settings][AirPrint Settings]. 4. Click [Edit...]. 5. Specify the required settings, and click [OK]. [Use AirPrint]Select the check box to enable printing with AirPrint. To disable AirPrint, clear the check box. [Printer Name]/[Location]/[Latitude]/[Longitude]Enter the name and the installation location information to help you identify this machine when operating your Apple device. This information is useful if you have more than one AirPrint printer. [Speed/Image Quality Priority] Select [Speed Priority] or [Image Quality Priority] as the quality mode for printing with AirPrint. This function is only enabled when printing a PDF. If you change [Printer Name] If the set [Printer Name] is changed, you may become unable to print from a Macintosh you were using. This occurs because (Configuring DNS) for IPv4 is also changed. In this case, add this machine to the Macintosh again. Printer name and location [Printer Name] and [Location] are reflected in the following settings respectively: [Printer Name] can also be set in (IPv4 Settings). [Location] can also be set in (Device Information Settings). You cannot print using AirPrint. Make sure that the machine is turned ON. If the machine is turned ON, restart the machine and see if the problem is solved. Make sure that no error message is displayed in the machine's display. Make sure that Apple devices (iPad/iPhone/iPod touch/Macintosh) and the machine are connected to the same LAN. AirPrint is a feature that allows you to print high-quality documents without having to install additional drivers. Now, lets get started. Make sure your iPhone and your AirPrint-enabled printer are connected to the same Wi-Fi network. Connecting to the same Wi-Fi network ensures that your iPhone can communicate with your printer. If you're not on the same network, your iPhone won't be able to find your printer. Open the app that contains the document or image you want to print. Most apps on your iPhone will have a print option. This includes Mail, Photos, Safari, and even third-party apps like Dropbox and Google Docs. Tap the share icon or the (more) icon to find the print option. The share icon typically looks like a square with an upward-pointing arrow. In Mail, its at the bottom of the screen; in Photos, its at the bottom-left corner; in Safari, its at the bottom-center. Tap Print and then select your AirPrint-enabled printer from the list. If your printer doesn't show up immediately, give it a few seconds. Sometimes it takes a moment for the iPhone to detect printers on the network. Choose the number of copies you want to print and any other options such as which pages you want to print or whether you want color or black and white. You can also select double-sided printing if your printer supports it, and choose a specific page range if you don't need to print the entire document. After you've selected your printer and print options, just tap Print in the upper-right corner. Once you tap Print, your iPhone will send the print job to your printer, and you should hear it start up and begin printing shortly after. BenefitExplanationConveniencePrinting from your iPhone means you don't need to transfer files to a computer just to print them. Its a straightforward process that can save you a lot of time.MobilitySince you always carry your iPhone with you, you can print documents from anywhere as long as you have access to an AirPrint-enabled printer.No Additional Software NeededWith AirPrint, theres no need to download any additional drivers or software, making it a hassle-free experience. DrawbackExplanationPrinter CompatibilityNot all printers are AirPrint-enabled, so you may need to invest in a new printer or find workarounds if yours isnt compatible.Limited CustomizationAirPrint doesnt offer as many customization options as printing from a computer, so you may have fewer printing preferences to choose from.Network DependencySince you need to be on the same Wi-Fi network, you wont be able to print if the network is down. When it comes to printing from your iPhone, theres are a few extra tips and tricks that can enhance your printing experience. For instance, you can use third-party apps to print to non-AirPrint printers. Apps like PrintCentral Pro and Printer Pro can bridge the gap between your iPhone and older printers. Also, if youre looking to print photos, consider using photo-specific apps that offer more editing and printing options before you send your images to the printer. Another thing to keep in mind is the quality of your printouts. Make sure that the documents or images youre printing are of high resolution to avoid pixelated or blurry prints. Additionally, regularly updating your iPhone and printer firmware can help avoid any compatibility issues and ensure a smooth printing process. Lastly, for those concerned with privacy, remember that printing over a public Wi-Fi network can pose security risks. Always make sure youre connected to a secure network before sending documents to a printer. Connect to the same Wi-Fi network as your AirPrint-enabled printer. Open the app and select the document or image you want to print. Tap the share icon or the icon to find the print option. Select Print and choose your printer from the list. Choose the number of copies and any other print options. Tap Print to send the job to your printer. You can use third-party apps like PrintCentral Pro or Printer Pro to print from your iPhone to non-AirPrint printers. Most apps that support sharing or exporting files will have a print option. This includes Apples native apps and many third-party apps. Check the documentation that came with your printer or look up the model online to see if it supports AirPrint. Yes, if your printer supports these features, you'll find the options when you select the printer and before you tap Print. Make sure both devices are on the same Wi-Fi network. If they are and it still doesnt work, try restarting your iPhone and printer or check for any updates. Printing from your iPhone doesnt have to be a daunting task. With the convenience of AirPrint and the mobility of your smartphone, you can easily print documents, emails, photos, and more wherever you are. Just remember to ensure your printer is compatible, and youre connected to the same Wi-Fi network. BenefitExplanationConveniencePrinting from your iPhone means you dont need to transfer files to a computer just to print them. Its a straightforward process that can save you a lot of time.MobilitySince you always carry your iPhone with you, you can print documents from anywhere as long as you have access to an AirPrint-enabled printer.No Additional Software NeededWith AirPrint, theres no need to download any additional drivers or software, making it a hassle-free experience. DrawbackExplanationPrinter CompatibilityNot all printers are AirPrint-enabled, so you may need to invest in a new printer or find workarounds if yours isnt compatible.Limited CustomizationAirPrint doesnt offer as many customization options as printing from a computer, so you may have fewer printing preferences to choose from.Network DependencySince you need to be on the same Wi-Fi network, you wont be able to print if the network is down. When it comes to printing from your iPhone, theres are a few extra tips and tricks that can enhance your printing experience. For instance, you can use third-party apps to print to non-AirPrint printers. Apps like PrintCentral Pro and Printer Pro can bridge the gap between your iPhone and older printers. Also, if youre looking to print photos, consider using photo-specific apps that offer more editing and printing options before you send your images to the printer. Another thing to keep in mind is the quality of your printouts. Make sure that the documents or images youre printing are of high resolution to avoid pixelated or blurry prints. Additionally, regularly updating your iPhone and printer firmware can help avoid any compatibility issues and ensure a smooth printing process. Lastly, for those concerned with privacy, remember that printing over a public Wi-Fi network can pose security risks. Always make sure youre connected to a secure network before sending documents to a printer. Connect to the same Wi-Fi network as your AirPrint-enabled printer. Open the app and select the document or image you want to print. Tap the share icon or the icon to find the print option. Select Print and choose your printer from the list. Choose the number of copies and any other print options. Tap Print to send the job to your printer. You can use third-party apps like PrintCentral Pro or Printer Pro to print from your iPhone to non-AirPrint printers. Most apps that support sharing or exporting files will have a print option. This includes Apples native apps and many third-party apps. Check the documentation that came with your printer or look up the model online to see if it supports AirPrint. Yes, if your printer supports these features, you'll find the options when you select the printer and before you tap Print. Make sure both devices are on the same Wi-Fi network. If they are and it still doesnt work, try restarting your iPhone and printer or check for any updates. Printing from your iPhone doesnt have to be a daunting task. With the convenience of AirPrint and the mobility of your smartphone, you can easily print documents, emails, photos, and more wherever you are. Just remember to ensure your printer is compatible, and youre connected to the same Wi-Fi network. AirPrint is a feature that allows you to print high-quality documents without having to install additional drivers. Now, lets get started. Make sure your iPhone and your AirPrint-enabled printer are connected to the same Wi-Fi network. Connecting to the same Wi-Fi network ensures that your iPhone can communicate with your printer. If you're not on the same network, your iPhone won't be able to find your printer. Open the app that contains the document or image you want to print. Most apps on your iPhone will have a print option. This includes Mail, Photos, Safari, and even third-party apps like Dropbox and Google Docs. Tap the share icon or the (more) icon to find the print option. The share icon typically looks like a square with an upward-pointing arrow. In Mail, its at the bottom of the screen; in Photos, its at the bottom-left corner; in Safari, its at the bottom-center. Tap Print and then select your AirPrint-enabled printer from the list. If your printer doesnt show up immediately, give it a few seconds. Sometimes it takes a moment for the iPhone to detect printers on the network. Choose the number of copies you want to print and any other options such as which pages you want to print or whether you want color or black and white. You can also select double-sided printing if your printer supports it, and choose a specific page range if you dont need to print the entire document. After youve selected your printer and print options, just tap Print in the upper-right corner. Once you tap Print, your iPhone will send the print job to your printer, and you should hear it start up and begin printing shortly after.
