We remain 100% current with the CG question databank as of October 26, 2023. Looking back, I remember when the database of questions for this project was only in document format and consisted of around 28,000 questions. It was a huge undertaking to manually copy and paste them into an Excel spreadsheet. Once I learned Visual Basic programming, I created a program that integrated with the database, making it available on CD. However, keeping up with new questions from the Coast Guard proved challenging, especially when updating the CDs. This led to the concept of online study being born. With the help of a skilled programmer and an updated database, we made the questions available for free online, allowing anyone with access to the web to use it easily and update with new questions as they came out. The development of the TesTTaker software enabled us to offer both online tests and local installations, making it more efficient. Our online testing system went live in February 2000 and has undergone many improvements since then. We're grateful for over 70,000 registered users who have contributed to our project's growth over the past 25 years. More than 1,500,000 quizzes have been taken between the old and new online studies.
