Ratings and ReviewsRating: 3.8/5 based on 7K+ reviews(*) is required 5 * I've used the app at several different locations and haven't had any issues. I let the app and phone do their updates, restart the phone, just like I would any computer. So far all is good.1 * After installing the new app, this camera is almost useless. I can take video and pictures through the app but I can't transfer them from the gear 360 to my picture gallery on my phone. You can take the micro SD card out and transfer the data but when you open the pictures or videos on a computer you get two separate images, the front camera and the back camera. Super disappointed! * Keep trying to run to camera mode 5 minutes.....10 minutes until it stop automatically! whar this app can do is just connect to my note 8 quickly , but cannot use as remote app at all, wasted my time to installed and the data usage ! * You totally messed up a good thing . I recently took my camera to Puerto Rico where I took great 360 video and Pictures. Since I got back this app no longer connects to my Note S10 plus. This is totally unacceptable. I have been a Samsung customer for over 10 years. I have kept loyal to this brand. I am highly upset that you made my camera useless.1 * Great camera. Great phone app. But I don't want to use it ONLY on my phone. I have a perfectly good Tab S4 I bought last fall that would totally rock an app to edit photos/videos. So I do not edit videos or photos. They just live on my Gear 360. Hidden from the world. Change this please.2 * Camera works good, app doesn't work properly. . I open the app and I can open the camera, but I try to open the gallery and it just freezes nd closes the app and stops working. I open app again and it doesn't work (again) nd closes app. I pretty much have an -expensive- useless camera at this point. Please fix app.1 * Keep getting error that "Error occurred, try again" when trying to save 360 photos to device, which is not a very helpful message! * I can't see the gallery in my S9 from gear 360 . I can't edit or transferred from the camera gear 360. Since December 2019. The recently 5 stars on this app are fake. Since December 2019 to now may 16 2020, 6 months without any answer from the company. SHAME ON YOU.....2 * I have the old 360 camera and as soon as I update the app it does not communicate with my phone any more. Also it would not upgrade the new firmware so I deleted and started again and it works again. Could be faster but thats probably due to me having the old camera.1 * Terrible I cant access it on my new phone and why can't it be used as a webcam come on Samsung!!! I have ended up with a paperweight! Is this the direction all of your hardware will go?! * I have an s8 plus and the gear 360 2017 version. This app continuously crashes. It crashes when going to live view, and when going to transfer video and photos. I want to love the app, but the crashes make for an incredibly frustrating experience. The app works 10% of the time, the remainder of the time it crashes. I want to give it a good review, but the is no way for me to resolve these issues for a better user experience. Hoping Samsung can shed some light on this.1 * App isn't good at all. I'm having problem after problem the camera linking to the app. It connects but does not allow me to take pictures, look at the gallery, or record live. Several hours on the phone with Samsung also pointless. The other version was fine. Had to messing with something already fixed and now it's broken. I'm pissed.1 * Doesn't have live broadcast under gallery. Even after uninstalling and reinstalling the app.1 * 1 cannot connect live broadcasting, 2 cannot connect to the gallery for the video or photos 3 not producing videos Totally waste this app...3 * EDIT: Please provide English patch notes. I use this with the original Gear 360. Seems pretty much the same as the old version of the app so far, but with some UI changes. Both apps are serviceable, if a bit basic. As I want to mount the camera upside down sometimes, I'd like to see an option to flip the image somewhere in either the camera settings or as a tool in the editor after a video is saved.Previous versionsSamsung Gear 360 (New) 1.4.00.9 APK for Windows (#14000009, 78.1 MB)Samsung Gear 360 (New) 1.4.00.4 APK for Windows (#14000004, 79 MB)Samsung Gear 360 (New) 1.4.00.1 APK for Windows (#14000001, 78.9 MB)Samsung Gear 360 (New) 1.3.00.7 APK for Windows (#13000007, 78.8 MB)Samsung Gear 360 (New) 1.2.00.9 APK for Windows (#12000009, 79 MB)Samsung Gear 360 (New) 1.2.00.8 APK for Windows (#12000008, 78.6 MB) Samsung Gear 360 (New) With the Samsung Gear 360 (New) app, you can create, view, and share 360 content on your smartphone, and enjoy various features by connecting Gear 360.* This app is compatible with Gear 360 (2017) and Gear 360.Main Features:- Connect to and disconnect from Gear 360 - Remotely shoot video and preview your recording- View 360 content and save files to your smartphone- Share your created content on social media services- Share your best moment using Live Broadcast (only Gear 360 (2017))- Check Gear 360 status and settings.- Sync Date and Time, as well as GPS data.- Highly compatible with Gear VRGear 360 lets you easily create, view, and share high quality 360 videos and photos of your memorable experiences.With 360 Live Broadcast, share your best moment in real time and get live interactions (Only Gear 360 (2017))Create your own virtual reality content to enjoy through Gear VR. Given the official discontinuation of both the mobile and PC software by Samsung. Can you release all relevant software for this camera as open source? Allowing the community the chance to support these cameras in lieu of official support would be a great compromise from my perspective. I have an iPhone 12 and a fairly new HP desktop. I keep reading nothing but amazing reviews about this exact model but I need some help setting it up. I have the activation product key because mine is brand new and had never been opened. If anyone could help me I'd really appreciate it! I keep getting an error message and I've tried it a bunch of ways Thank you very much! Jeff in CA I've had the Gear 360 camera for two years now. The software for PC and Mac straight up does not work at all at this point. The iPhone app seems to be the only way to get the photos and videos I've taken converted from there 360 format to the equirectangular format.I've search for third-party solutions and found nothing. This app constantly loses connection with the device. On the rare occasion that Samsung makes an update the app works temporarily. This thing is a paperweight. I am so incredibly disappointed and it makes me question ever buying from this company again. The developer, Samsung Electronics CO.LTD., has not provided details about its privacy practices and handling of data to Apple. For more information, see the developer's privacy policy. The developer will be required to provide privacy details when they submit their next app update. App Support Privacy Policy
