Introduction

In addition to the information provided on PetSmart in the Situation Analysis, we formed a survey in order to obtain further information on PetSmart's targeted audience, pet parents. Using the guidelines of specific research objective points, we created a survey to guide PetSmart's marketing strategies and tactics by using the responses of its targeted audience. In the following paragraphs, we will explain in detail our research objectives, the method and design used for the survey, along with the actual survey itself accompanied by a coding scheme.

Research Objectives

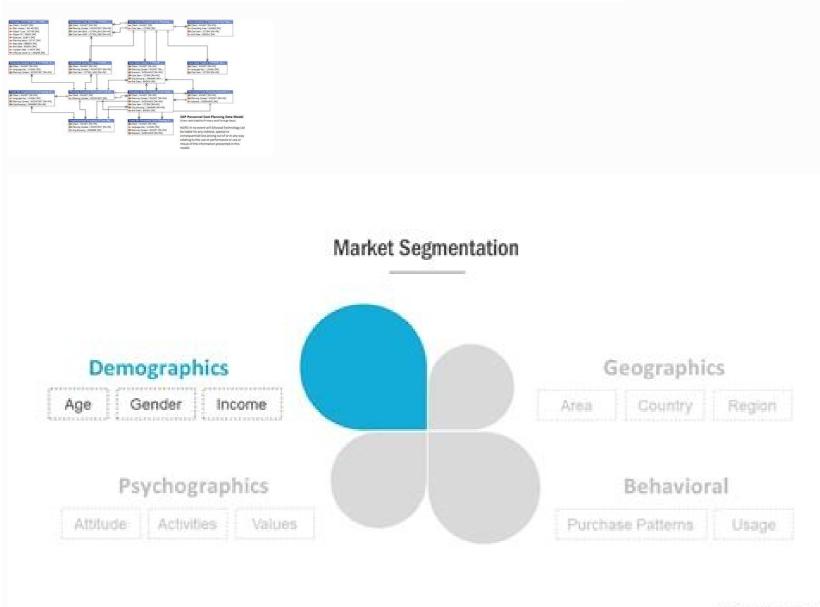

Today, pet owners have an emotional tie to their pets - a group referred to as pet parents. The survey will be utilized to gain insight into this group to see what they are looking for in a brand and if cause-related marketing affects their purchases. In order to obtain the needed information, we constructed our survey from a list of research objectives. We determined PetSmart's informational needs through the following set of bullets:

- To measure the target market's pet-shopping frequency
- To measure the target market's monthly spending on pet-related products and services
- · To measure the target market's awareness of brands within the pet products and services industry
- To assess the target market's attitudes/beliefs about differentiating characteristics of brands within the pet products and services industry
- To assess the target market's attitudes/beliefs about PetSmart
- To assess the target market's attitudes/beliefs about PETCO
- · To assess the target market's awareness/attitudes/beliefs about current PetSmart promotional and cause-related marketing campaigns
- · To identify strategies to inform and promote cause-related marketing efforts for PetSmart
- · To identify if there are gender and income differences for the above measures

Method

We plan to conduct the survey based on three key factors. First, we will survey a sample of pet parents. This sample will include young adults from the age range of 18-25 and those

between the ages of 45-60. In order to make the survey related to our research purposes, we will create a screening question that does not allow those without pets to participate in the survey. Each team member will survey at least 20 respondents to obtain accurate results. This will make a sample size of 120 respondents. In order to obtain these responses, we will use selfadministered surveys that are issued through various online platforms. Table 1, below, shows each members intended method of distribution.

ICH Harmonized Tripartite Guide A ¢ â, ¬ "E9 (R1). The following are three essential roles of SAP must be kept in TC's conduction. When compared to the SAP is a technical document in depth In which the statistical techniques are detailed for design and analysis of clinical trial data. Yuan et al.2019 published an article of special interest on à ¢ â, ¬ å "guide to the Plan of Statistics Analysis: [Figure 2]. Transparency and reproducibility have been a fundamental term that adds value in the data of clinical trials. SOP Clinical trials. SOP Clinical trials. and objectives, secondary objectives, exploratory objectives, primary / secondary / exploratory endpoints, trial population, designer of the trial. Sample with justification Ones / assumptions and the meals of randomization. The following guidelines and recommendations for the content of an SAP: SAP is not an independent document and should be read together with the Clinical Test Protocol. Crà © Dito for all his investigation. A SAP is a more challenging task in a clinical test protocol development that requires a strong command on statistical methodology, medical terminology and visualization power. SAP is a more essential document in CT that needs to report regulatory authorities (for example, drug and food administration (FDA), European Medicines Agency (EMA)). It also includes detailed procedures to execute the statutical analysis of the primary and secondary variables and other data. Title and registration Introduction methods Estudio Status Statistics Analysis of the trial population Figure 3: A, Gamble et al. The following detailed important points that you consider Development of SAP in the CT Protocol, detailed from the planned statutic analysis. SAP is usually developed as a one Document, and written after the protocol has been completed. Verification list / Detailed guidelines for SAPs in clinical trials in CT SAP development, we must take into account all detailed / standard guidelines. It provides explicit orientation in the statistical programming and the presentation of the results for the clinical trials is to provide a Practical Detailed Guide to write an effective sap. The ICH E9 guidelines declare that "the main characteristics of the eventual SAP of the data should be described in the statistical section of the Protocol". SAP. The need for research studies of clinical trials to SAP written and documented, particularly for regulatory studies. Determine the primary endpoints and secondary endpoints. The most important thing you should consider while performing a clinical trial is to execute the test with a minimal bias. According to ECH E9 SAP, generally known as reports and analysis plans, it can also be known to data analysis (DAP) or statistical analysis plans (SAP) in other organizations. The 2011 Conference document published online explained the importance of reviewing the statistical analysis plan. KOLABTREE Freelancer and Biostatistian Rudra Patel provides a full guide on how to develop a statistical methodology directly affects the decisions made by clinical trials, well-documented confidentiality, maintained and transparent statistical conduct is essential. SAP is intended to be a complete document that contains a detailed and technical description of features of the analysis of data of clinical trials in the development of SAP in the clinical trial must explain points of prominent key in depth. The great contribution of the medical / bioestatistic statistics, apart from developing an standard SAP is for design, monitoring and analyzing the data of clinical trials. must be explained in the SAP. Describes the systematic planned statistical methodology of a research study of clinical trials. The SAP once development. Test objectives Data sources Studied Study Study methodology Analysis of sensitivity and missing data The SAP clinical assay must be developed with a in-depth discussion between the main researchers and statistics. It only takes a minute to tell us what you need to do and get expert quotes for free. The Consort website in 2017 Guidelines published by Gamble et al.2017, the guidelines of these articles recommend a minimum of 55 important elements that should be considered by developing a SAP following. MRC clinical trial unit at University College London SOP for statutory principles (version 5.0), 2017. Test planning and design station Ecuador Network, a resource center for Good Reporting health research studies. It should be recognized that the SAP is a working document, since the statistical analysis may depend on unpredictable aspects of the trial, which includes the objectives and objectives, the population of trial, the designer of the sample (including justifications and assumptions) and randomized methods. 2017, the guidelines are divided into 6 main. Main Ahrweiler et al. To improve reproducibility, transparency and validity between clinical trials. However, you can find a detailed detailed explanation of each verification list by article in the elaboration document. Below are a statutous role and responsibility, to write a declaration of investigation or hypothesis of the study of clinical trials. It also provides detailed details on how it will be reported in CT. In addition, some other important considerations related to SAP in TC include: a way to minimize bias is blinding the bioestatistic. The following are key documents and key links used in the development of SAP in the clinical assay (Figure 4). Gamble et al., (2017), in its article, recommended a minimum of 55 articles that should be included when developing the SAP. A detailed checklist of 32 verification lists to develop the statutical analysis plan checklist (SAP) (Word). If protocol amendments are made, the SAP is also modified. Transparency: Transparency on how we will proceed to analysis in advances with the methodology that communication to all those involved in the study on how to proceed replication: facilitates replication for a future team Research can follow the same steps to confirm. The results in it or a new sample. However, the level of detail depends on the complexity of the trials. Annex on the links and the analysis of sensitivity in clinical trials to the guide on statistical principles for clinical trials, the final version dated November 20 2019 (last time is accessed at 09.03.2022). The SAP is the most used document to guide the statistics. 1. These are divided into 6 main sections of: Title and Test Registration (11 Articles and Subtremes) Introduction (8 Articles and Subtans) Analysis (17 Articles and Subtises) The Institutes and Agencies involved in the realization of clinical trials must ensure that there are robust policies and SOPS to support the development of SAP. The important guidelines used in the development in SAP are ICH E9 (International Conference for the Harmonization of the Technical Requirements for Pharmaceutical Products for Human Use) and Spirit (Standard Protocol Elements: Recommendations for Interventional Testing). This template can be used to develop an SAP. It is important that each clinical trial has a clear and integral statistical analysis plan (SAP) to support reproducibility. The following four important types of SAP are used in a clinical assay (Figure 1). Figure 4: Key documents and key links used in the development of SAP in the clinical trial 5. The development of SAP in the clinical trial trial 5. The development of SAP in the clinical trial 5. The development of SAP in the clinical trial trial 5. The development of SAP in the clinical trial of statistical analysis plans in clinical trials. Hiring an independent clinical statistics for help with the SAPs that develop an SAP often requires the support of an independent clinical statistics of equipment is in charge of developing the SAP in coordination with the main investigator of the CT study. While we write SAP, we usually follow the ICH E3 and E9 quidelines. Ideally, a bioestatist must develop the SAP with the help of the main investigator and in the alignment with the protocol. In addition, an SAP must describe in detail the statistical methodology, Say, analysis of efficiency, analysis of security data, report conventions, etc. SAP's declaration is also included in the Ecuador network MRC-NIHR Evaluations of the Methodology Investigation Association (TMRP). The SAP must be documented in such a way that all manipulations and analysis of data carried out may be replicated. According to the standard guidelines with the best practices, it is important for the clinical trial project, the statistics / bioestatistics prepares a study SAP before the clinical trial begins, detailing all the planned analyzes, the stop Meters of the study, including the definitions of an analysis and the basic / advanced statistical methodology. Therefore, each clinical trial has a clear and detailed Savia to its support for reproducibility. JAMA; 318 (23): 2337-2343, Available online, (Last access 26.02.2019), DOI: 10.1001 / JAMA.2017.18556. The guidelines for the content of statistical analysis plans in clinical tests in depth described in Jama. Our Freelancers have helped companies to publish research documents, develop products, analyze data and more. The analysis plan organized systematically helps the team of clinical trials to be together on the same page and adds another layer of specificity to TC. However, the template should be customized according to the test requirements. industry: Statistics Principles for Clinical Tests, Figure 2: Detailed important points that they consider when developing SAP in Protocol CT. Clinical trials are used to evaluate additional benefits and improve medical medical care interventions. With the help of an experienced bioestatism, you can develop a complete and error-free SAP, which will improve the quality of your clinical trials. In clinical studies, SAP is one of the important documents critically. Detailed guidelines developed through Regulatory authorities, magazines, industry representatives and a clinical trials (UKCRC CTU). Examine clinical trials consultants in Kolabtree now and get in touch with an expert expert Kolabtree helps companies observe experts on demand. What is a SAP? References and additional reading: ICH GUÃE GUIERA Harmonized: E9 Stattical Principles for Clinical Trials: Current Version of Step 4, February 1998. STATISTICS SPECIAL / BIOstatics can help develop SAPS in accordance with the guidelines standard. SAP is a defined scheme of statistical statist Bioestatism and completed before presentation to the Board of Review and regulatory authorities. Data monitoring Interim Statistics Analysis of SAP are used in a CT SAP is written mainly as a separate document or included in the protocol of CT study as a standard operating procedure to treat the statistical part of the clinical study. Browsefigshare. From the last década, increasing Rate patients recruited in clinical trials for drugs / medicines, have been from Europe and The United States, as well as developing countries. To obtain the best practice of scientific research studies A de CT, the reproducibility of the investigation and to avoid the concerns of misuse of clinical research, a clear and very transparent SAP is needed, to improve the conduct of trials and reports. The SAP must be applied to a clean or validated data set for an analysis. A test master file is required with all Relevant at the end of the trial by the biostatics. 3. The statistics must be referred to the declaration of the consort (and any extension) and also to the statistical principles of ICH E9 for clinical trials (PDF, 325 KB). KB). E3 and E9 do not specify specific statistical techniques. The Clinical trials (PDF, 325 KB). SAP must contain a depth description of the statistics that will be used and a definition of the statistical output that It will be included in the Clinical Study Report. The main intention of being more applicable to the final analysis of CTS, as well as the randomized randomized randomized tc of posterior phase. Statistics Analysis Plan (SAP) In a clinical trial (CT) a well-written and complete statistical analysis plan (SAP) is important to increase the quality of clinical trials and make it more válido and widespread . The SAP must be completed before the analysis of data and before treatment without blinding. security data, reports conventions, etc., in addition, in the same paper discussed where, by what, by What a sap, when and who is, and highlights the key content of the SAP. In general, the following should be included in an SAP (Figure 3). National Institutes of Health (NIH) published Å ¢ â, à "Rules for the Clinical Study Trials and Results of Information Information: in the Trial Register of the Mandates, the publication of the Clinical Test in Course of Recruitment o Results within Clinical Trials. Study Protocol. Ensures that analysis to evaluate all previously planned study hypotheses are carried out in a scientifically valid manner and that all decisions are documented. Importance of the Statistics Analysis Plan in CT Clinical Trials is carried out in all new development processes of / Drugs and medical devices. This gives us an idea of the content of the body of the individual SAP sections. The standard guidelines suggest that SAP needs to be stored in the The clinical test master file is used during the regulatory, authorizes audits to verify if the statistical documents followed exactly with standard guidelines. Guidelines

Importance While guidance on statistical principles for clinical trials exists, there is an absence of guidance covering the required content of statistical analysis plans (SAPs) to support transparency and reproducibility... Objective To develop recommendations for a minimum set of items that should be addressed in SAPs for clinical trials, developed with input from ... Utilization Analysis - Utilization Analysis is an analytical SAP Fiori application built using Analysis of utilization and analysis of utilization rate of employees across several predefined analysis steps such as company, service organization, cost centers ...
