My reviews are based on my experience and thorough research. When you make a purchase using my links, I may earn a commission.Learn more Still looking for the perfect gift for your teenage child?Your kid loves archery?The Barnett Vortex Youth Compound Bow will save your day!It is a fantastic beginner bow, which will grow with the archer while he gains experience! Before I explain in detail what makes this bow so great, lets take a look at a quick summary-Quick Facts About The Barnett Vortex Name:Barnett Vortex Youth Compound BowBow Type: Compound BowDraw Weight: 19 LBS 45 LBSDraw Length: 21 27Let-Off: 60% 70%Availability: Right Hand OnlyBow Sight: YesBow Quiver: YesArrows: 3xCheapestPlace To Buy: Amazon.comAfter this overview, lets dig a bit deeper and take a more detailed look: The Barnett Vortex Youth Compound Bow Set ExplainedYou can shoot this bow right after taking it out of the package.The only essential thing you will need is an archery target.The Adjustable Draw WeightBeing able to change the draw weight in such a big range is a hugeadvantage.As a beginner, it is always a good idea to start with a lower draw weight. Even as an adult, it is better to start with a weight of around 25 LBS.For a teenager, it is great that the lowest draw weight is only 19 LBS.Perfect for learning the right archery techniques.And once the young archer gains experience and builds up some strength, you can just adjust the draw weight to a higher level.It will take years before your kid will outgrow this bow!The Adjustable Draw LengthLooking at the draw length, you will notice that it also can be changed.Again this is awesome for archers that are still growing.Other bows need to be replaced when the archers arms become too long.Not the Barnett Vortex Compound Bow!Just change the draw length and save a lot of money.The Let-Off Makes Drawing The Bow A BreathEvery compound bow has a certain let-off.The let-off is what makes compound bows special and such great bows.The pulleys (or cams) of a compound bow will reduce the draw weight of this bow by up to 70% when fully drawn.In the beginning, you will have to pull back the full weight of the bow. But the more you pull it back, the easier will it be.I am sure you have used a pulley system somewhere already and know how it works.It works the same in a compound bow.Right Hand Only (The Only Thing I Didnt Like)The bow is only available for right-handed archers at the moment.This is the only disadvantage and I hope that the manufacturer will make a left-handed version available in the future.The Bow Sight Could Be BetterA good archery bow set needs a bow sight.The bow sight included here is nothing fancy but will do its job right.It is a 3-pin sight, which will help the young archer hit the mark consistently.Once you think it is time for a more advanced sight, you can check out theTruGlo Single Pin Sightor theTrophy Ridge React 5 Pin Sight.Both are great!But you wont need them when you are just getting started.The 3-pin sight is already pretty good.The Bow Quiver: Easy Access To Your Arrows! love that this has not been overlooked.It is just convenient to have a quiver that is attached to the bow. You dont need to buy another type of quiver!if you dont want to.A bow quiver gives you quick access to your arrows without hindering your movements.Perfect for both target practice and hunting.This bow quiver has room for three arrows.The Arrows Round Up The Package Nicely!Simple target practice arrows are part of the set.They are of the perfect length for this bow, so you dont need to worry about getting the right arrows anymore.Just take them out of the package and start shooting.Once you need more arrows, make sure you buy some of the same lengths!Never buy shorter arrows.If an arrow is too short, it can fall off the arrow rest and cut into your hand!The arrows are target practice arrows and should not be used for hunting.If you want to go hunting, make sure the draw weight of the bow is set to at least30 LBS and your arrows are equipped with broadheads. Is TheBarnett Vortex Youth Compound Bow Any Good?It absolutely is!There is no other bow that competes with it in that price segment!When you or your teenage child learn archery with this compound bow, you will have the best possible start!Even if you are not new to archery, but want to take your archery game to the next level, this bow will just do that.The draw and release aresmooth and the accuracy is great.With the help of the bow sight, you can hit targets easily that are more than 20 yards away, too.If you want to add a peepsight, you can do that without a problem, because the bowstring can be separated easily to fit in the peep sight. Conclusion: The Barnett Vortex Is A Great Compound Bow!It absolutely is!The bow is of great quality and will keep your teen busy for many years to come.The only things that I noticed that were not 100% perfect were the sight and the arrow rest.They are functional, but there are better ones out there.Dont worry about that, though.Let your kid get used to the bow and archery. Once it wants to take the next step, the bow can easily be upgraded. We Value Your SatisfactionYour satisfaction is important to Hunting Giant. Great crossover I have a Excalibur crossover I bought years ago for close to \$1,000 this little \$200 crossover has all the same features is 25 ft per second less but it will get the job done. Bow hunting and archery is all about getting close to your Quarry and making a perfect shot not about how fast the arrow can get there if you can shoot a deer at 30 yards but can't hit the vitals you just lost the deer or the bolt this little bow is perfect for getting close and has more than enough power for any deer in the woods if you are looking for a crossover that's economic and simplistic this is crossover for you trust me I've used recurves for over 50 years great job Barnett and a great crossover really is a little tack driver Bought the trisstrike and love it This little unit is awesome for a 50lber three bolts in the chamber makes it a fun machine. Definitely recommend buying. The bolts are also really well made. I shot two 1/16 pieces of steel that were put together and it pierced through both. And didnt even phase the arrow. I wish the pistol grip had less play, other than that. It is a very nice crossover "It fits like a glove! I didnt realize it wasnt a hard case, but it's surprisingly sturdy and very high quality. I'm impressed." I can't find replacement 7 inch 2F replacement bolts where is replacement bolts ?? Barnett has been producing quality crossbows for over 50 years now, and they have sold over 1 million crossbows to datebacking up their claim to be the real industry leader of quality crossover manufacturing and engineering. Barnett has been a pioneer in the bowhunting industry, with inventions like the Commando self-cocking crossover, the first compound crossoverthe Demon, and their patented quick detach front end on their crossbows.They have put a lot of time and resources into developing quality bows that are built for the hunt. Barnett has also provided quality youth bows for many years, and their latest addition is the focus of this review.In this field evaluation, my daughter Sarah and I will evaluate the Barnett Vortex; a versatile youth compound bow that has everything needed to get your youngster started in the sport of archery and bowhunting. This youth archery bow will also grow with the young archer. Draw weights are adjustable from 16 lbs to 45 lbs and will provide the young hunting enthusiast an opportunity to learn and hunt in the woods. Adjustable draw modules are included for a quick and easy draw length change without a bow press. The new Vortex youth bow from Barnett Barnett Vortex Basics Well begin with the basics of the Vortexincluding a look at the features and accessories included with the package. The Vortex is a youth compound bow that comes complete with everything the young person needs to get started in archery and bowhunting, and to grow with the bow. Included with the bow were a basic plastic arrow rest, 2-piece three-arrow quiver, three arrows, and a 3-pin fiber optic bow sight.The package also included the 5 cam modules required for draw length adjustments between 21-27 inches in half inch increments. Allen keys are included for the adjustments and setup. The package for the Vortex can be used as a case as the bow simply snaps into locking posts on the packaging (see figure 1).The draw weight on the Vortex is adjustable from 16-45 lbs based upon the combination of module used and string position (positive, neutral, negative). Changing the draw length modules does not require a bow press; however, changing the string position + or on the cams does require a bow press. You can fine tune the Vortex to fit your young person by adjusting the string position on the cams. When putting the string on the e post on the cam, a inch of draw length and 2.5 lbs of draw weight is added to the Vortex. When putting the string on the - position, a inch of draw length and 2.5 lbs of draw weight is removed. Both cams must be on the same post or the bow will be off a inch either way.The shape of the grip on the Vortex is molded into the riser and there are no plastic or wood pieces on the grip. It has a good feel to it and seems just right to fit the size of younger hands as they progress through the early hunting age. There is no silencing equipment found on the Vortex, but I would recommend adding string and limb silencers for hunting situations. The Vortex has a one piece aluminum riser with split composite limbs. Dual cams provide a smooth draw with 60-70% let-off. Initial Setup The Vortex came complete with all accessories needed for your youth to get started in our great sport of archery. I added a kisser button, string D-loop and installed the rest, sight and quiver that came with the Vortex bow. My daughter wanted pink arrows, so the natural choice was the Pink Arrow 25/45 by Victory Arrows, the Official Arrow of the Pink Arrow Project. The Pink Arrow Project is about archers helping archers to fight cancer and is headed up by Mary Hale. You can read more about this project at Pink Arrow Project.New Pink Arrows from Victory and the Pink Arrow ProjectSarah also used the official broadhead of the Pink Arrow Project, the pink 3-blade 100 grain Innerloc model 3600 head from Sullivan Archery. These fixed-blade heads have a new blade alignment technology worth a look.I performed the usual initial setup to ensure that the nocking point and rest were properly adjusted and I tuned the center shot using my Easy Eye Laser Eze-Center Gauge. Next, the Vortex was paper tuned and ready for my daughter Sarah to put the bow to the test.Vortex has all the accessories needed to get started Testing My evaluation began with a thorough visual examination of the Vortex for any workmanship quality issues or defects. Upon inspection, I found no visible defects. The eccentrics moved freely when pressure was removed from the strings and cables. All parts fit together perfectly, nothing was loose and the bow and each of its components were mechanically sound.I was pleasantly surprised at the quality of the Vortex considering its price point and when compared to other starter bows on the market. The quality is far superior to anything for youth that I have seen at this price level. Sometimes you might just get more than you pay for and this seems to be the case with the Vortex youth bow. Shooting We began with the basics for Sarah, as she is just starting in our great sport. We practiced form and function first (and eliminating the fear a seven year old feels when she first shoots a bow). Once we had the Vortex adjusted to Sarah for draw length, draw weight and sighting inshe began shooting the bow repeatedly from a distance of 10 yards. We eventually, over time, worked our way out to 30 yards. This step took quite some time, which was expected but she eventually became comfortable and accurate at the longer yardages. Over all, Sarah became comfortable with the Vortex quickly and was shooting for accuracy within the first weeks of practice. We concentrated on repetition and form for several weeks in preparation for hunting for the first time. During our practice Sarah used the Vortex the entire time and became quite good with the bow. I was able to gradually adjust her draw weight up until she could comfortably shoot the poundage necessary to successfully harvest a deer with this bow, provided the opportunity presented itself.The Vortex performed very well for Sarah throughout our time of shooting. The adjustability features made it easy to start her at low poundage and then work up to hunting poundage (45 lbs is the min. poundage required for hunting in Pennsylvania). We found the Vortex to shoot accurately, provided Sarah did her part and remained consistent.The bow was quiet, but I would recommend adding Limb Savers and String Silencers for hunting situations to make the Vortex all the more quiet. At one point during the testing, Sarah made the comment to meThis new bow is easy to shoot. This made it much easier to teach Sarah the basics of archery shooting because she had confidence that she could do it and do it well. The Vortex enabled her to start out slowly, but grow into hunting situations with the bow. I only wish that the Vortex was available to me when I purchased youth bows for my two sons years ago. I spent considerably more money for their bows and did not really get any more for my money. In fact, the Vortex has more adjustment in it than either of my sons youth bows had.Easy draw length adjustment using modulesThe Vortex is an excellent youth starter bow at great value for the price. Sarah loved this bow. She loved the way it looked and thought it was comfortable to shoot. Importantly, she just had a great time learning to shoot with the Vortex. The adjustability features on the Vortex made it easy to fit the bow to her needs, but will also grow with her as she grows. We were all looking forward to her first hunt and unfortunately we were not successful at taking a deer with the Vortex this year, but we look forward to next season when Sarah will again try her archery skills on the whitetail using her new Vortex bow.Sarah takes aim with her new VortexPros: great value, easy to adjust, room to growCons: accessories could be upgraded for improved shooter consistency Specifications Available in RH onlyMass weight: 2.3 lbs.Draw weights: 16-45 pounds peakDraw lengths: 21-27 inches (1/2 inch increments)Axle-to-axle length: 27.5 inchesBrace height: 60-70%String: 51 16-strands BCY B-500Cable: 32 BCY Dynafibre 97Finish: CamoStreet Price: \$99.99 [check availability and current pricing @Amazon]Dont forget to check out more posts by Keith Dunlap, or to learn more about Barnett Youth Archery and the products they offer shop current Barnett products on Amazon, visit barnettcrossbows.com online, or check our sister site, BowList.net, for more Bow related links.
