Deleting a Blank Page in Word: A Step-by-Step Guide to Removing Unwanted Pages The issue of a blank page at the end of a Microsoft Word document can be frustrating, but there are several steps you can take to eliminate it. First, look for paragraph markers with black squares beside them, which indicate that the "Page break before" setting is turned on. To fix this, click the Home tab and right-click the corresponding paragraph marker, selecting Paragraph... to remove the check next to "Page break before". Highlight the paragraph markers and page breaks, then hit the Delete key to get rid of them. If you still have a blank page, try pressing Ctrl+⌘ Shift+8 on Windows or ⌘ Cmd+8 on Mac to hide the paragraph markers again. This should delete the blank page if it's caused by a hidden undeletable end paragraph. To fix this, press Ctrl+⌘ Shift+8 and then display the paragraph markers at the beginning of each blank line. If you still see a single paragraph marker on the blank page, try deleting all the marks and reducing the font size to 01. Then, press Ctrl+⌘ Shift+8 again to hide the paragraph markers. If that doesn't work, double-click the section break to display the Page Setup dialog box and select Continuous from the "Section Start" menu. In some cases, you may need to save your document as a PDF without including the last page. To do this, click the File menu and choose Save as, then select PDF as the file format and enter the page range minus one. Click OK and then save the document.Removing Section Breaks in Microsoft Word: A Quick Guide Highlighting content on the blank page by typing a few words and pressing Ctrl + G or Cmd + G can help delete it. Then, type \page, press Enter or Return, click Close, and finally, press Del to remove the entire page from your document. Removing a section break in Word can indeed be undone by pressing Ctrl + Z or clicking the 'Undo' button. However, this might affect the entire document if different sections have unique formatting. It is best to review your document after removal to ensure everything looks right. Using the 'Find and Replace' feature, one can remove all section breaks at once by searching for them and replacing them with nothing.
