Its co-CEOs and founders are Alex Peters and Rohan Mahimker.[1] It is the developer of the 2011 and 2022 Prodigy Math, a roleplaying game where players solve math problems to participate in battles and cast spells, and Prodigy English, a sandbox game where players answer English questions to earn currency to gain items. Although each game is standalone, both are accessible through a single Prodigy account. The games are widely used in schools, though they have attracted criticism due to excessive in-game advertising for membership and their freemium aspects.[2]On April 21, 2022, Prodigy English was launched for grades 1 to 6. According to Prodigy Education, the new game encouraged players to "build their own online world, collecting supplies and exploring an exciting and interactive environment while learning and answering curriculum-aligned English and grammar skills." [3]In February 2021, Fairplay, formerly the Campaign for a Commercial-Free Childhood, an American advocacy organization, submitted a complaint to the Federal Trade Commission regarding the premium model of Prodigy Math. The organization stated that "[w]hile it] does cost nothing for schools to implement Prodigy, the in-school version encourages children to play at home" and that "And when children play at home, they are met with a steady stream of advertisements promoting a 'premium annual membership' that costs up to \$107.40." [2][4][5]James Bigg, a spokesman for Prodigy Math Game, responded to these allegations by stating in an email interview that the game notifies players about memberships "from time to time". Furthermore, Bigg has stated that "[Prodigy Education] takes this responsibility and sparingly so it does not detract from the free play experience or educational quality. ... (they) do not pressure users into upgrading." [6] ^ Vermont, Kira (September 21, 2021). "Education has just been transformed overnight". Toronto Star. Archived from the original on June 23, 2022.
