Today were going to do a reset oil service light on my BMW 3-Series E46/E90/E92, and Im going to step you guys through it. The BMW 3 Series (internally: E90 sedan, E91 estate car, E92 coupe, E93 convertible) served the middle-class segment.Ive already done the service myself, and now I need to reset the light. Otherwise, every time I turn the ignition on, it will remind me that it needs a service. So stick on here; I will show you how to do it.1997-2006 BMW 316i 323i 330i (E46) Service Light ResetSwitch the car off and hold down the left button on the dashThen turn the key to position one but dont lift the finger and keep pressing the dash buttonKeep holding the button down until you see RESET and itll begin to flashWhen the reset light starts to flash just release the finger and press it again to confirm the reset2007-2013 BMW 318i 320i 335i (E90/E91/E92/E93) Oil Light ResetTime needed:3 minutesIn this section, I will show you how you can reset the service intervals when they come up on your car. So, for example, it might be for the engine oil, vehicle check, brake pads, or maybe brake fluid. So the way you do this is:Turn on your ignition but you dont want to start the engineSo the first step is I havent got my foot on the brake or the clutch and Im just gonna press the START button once and that will bring up the dash lightHold down the RESET MILES buttonNow what you want to do is this button on the left of the dash that you normally use to reset your trip, you need to just hold it in. So press it in until you see a Service Item on the screen.Press the UP or DOWN button on the stalk briefly to scrollthe service minders that you want to resetOnce it comes up with the service item you can scroll through the different items by using the or button on the turn signal lever. So at the moment, Im going to scroll down and you can see its going to front brakes, vehicle check, oil brake, fluid brakes, front brakes, etc.Press and hold the BC buttonSince we are going to reset the oil then you have to display the Engine Oil icon on the screen. Then all youve got to do is hold in the BC button on the end of the stalk and then it will ask you to reset it nowRelease and then hold it again to confirm the resetNext, you need to hold the BC button in again, and then a little timer will come up so then it will reset and youre doneFor your info, this operation work for the fifth generation of the BMW3-SeriesE90/E91/E92/E93 (1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013 model years). For the latest model, you can reach it here.BMW 3-Series Service Interval Indicator SystemThe BMW service interval indicator system is an intelligent feature that will help you know when its time to service your car. It monitors certain aspects of your vehicle, such as brake fluid, tire pressure, and engine oil. This can prevent you from scheduling service when its unnecessary. But you should listen to your car and make an appointment with a qualified BMW repair shop before the indicator goes out.The system is linked to the dashboard Drive monitor and will tell you when your car needs maintenance. It will either have a green OK symbol to indicate that the information youre receiving is up-to-date or a yellow triangle icon if the listed components need servicing. Ignoring these warnings is risky for your cars engine and may even put you stranded.The system will alert you to your cars service needs based on your driving habits and the location youve been in. You should also consult your owners manual for more information about the vehicles maintenance schedule.FAQ BMW 3-Series Oil ServiceHow much oil does a BMW 330i take?The BMW 330i requires 5.6 quarts of full-synthetic oil.What oil can I use in my BMW E90?You should only use synthetic, high-performance oil in the E90 BMWs engine. Its essential to keep your engine at the correct density and viscosity to prevent unnecessary wear, and SAE 5W-30 meets both requirements.How often does a BMW 330i need an oil change?In the past, most cars changed their oil every three to five thousand miles. The current rule of thumb for oil is between 7,500 and 10,000. (And the owners handbook for your 330i probably suggests an oil change every 15,000 miles!) If you want to be on the safe side, you should replace your oil every 5,000 miles, especially if your 330i has more than 75,000 miles on it. You should use high-mileage synthetic oil in that circumstance.How expensive is an oil change for a BMW?BMW oil changes usually cost between \$135 and \$197. However, when you pull up to the repair shop or technician, you may be surprised by a greater total.Okay, so thats how you reset the BMW 3-Series oil service light and how you can check the intervals. I hope you enjoyed the content and thanks for your time. Until next time, cheers!Hi, Im Jacob, and I have been passionate about automobiles since I was a child. I have spent countless hours assisting my father in his garage, learning everything there is to know about car maintenance and repair. For ten years, I ran a successful repair business, where I gained hands-on experience working with a variety of vehicles. As a result, I have developed a deep understanding of the mechanics of the car and have become an expert in maintaining and repairing any vehicle. Reset oil service light BMW E90. From years: 2005, 2006, 2007, 2008, 2009, 2010, 2011. How to reset oil service light BMW E90.Insert your remote key into the key slot and press the START button once without putting your foot on the brake. How to reset the maintenance light and how do you reset service light for all BMW cars. The dreaded oil light. It illuminates the dashboard with a sinister glow, sending shivers down the spines of even the most seasoned BMW E90 drivers. But fear not, fellow enthusiasts! This comprehensive guide will equip you with the knowledge and steps to reset your E90s oil light and get back on the road with peace of mind.Understanding the Oil Light and Its ImportanceThe oil light serves as a crucial indicator of your engines health. It illuminates when your cars oil level is low or when the oil needs to be changed. Ignoring this warning can lead to serious engine damage, ultimately resulting in costly repairs. Methods for Resetting the Oil Light on Your E90There are two primary methods for resetting the oil light on your E90:1. Using the Service Interval Reset Button:Locate the button: The service interval reset button is typically located on the dashboard, near the steering wheel. Its usually a small button with a wrench symbol or the letters 'I' or iDrive.Turn the ignition to position 1: This is the position where the dashboard lights come on but the engine is not running.Press and hold the button: Hold the button down for about 10 seconds until the oil light blinks.Release the button: Once the oil light blinks, release the button. The oil light should now be reset.2. Using a Diagnostic Tool:Obtain a diagnostic tool: You can purchase a generic OBD2 scanner or a more specialized BMW-specific tool.Connect the tool: Connect the diagnostic tool to your cars OBD2 port, usually located under the dashboard near the steering column.Navigate to the oil service reset menu: Follow the instructions provided with your diagnostic tool to access the oil service reset menu.Reset the oil light: The exact steps for resetting the light may vary depending on your tool, but generally, youll need to select the Oil Service Reset option and confirm the reset.Before you proceed with resetting the oil light, its crucial to ensure the following:Check your oil level: Make sure your engine oil level is within the acceptable range.Change your oil if necessary: If its been a while since your last oil change, its recommended to do so before resetting the light.Consult your owners manual: Your E90s owners manual will provide specific instructions for resetting the oil light.Sometimes, resetting the oil light may not be as straightforward as it seems. Here are some common issues you might encounter:The oil light stays on: This could indicate a faulty oil sensor, a low oil level, or a more serious engine problem. The oil light blinks: A blinking oil light often signals a more critical issue, such as low oil pressure.The reset button doesnt work: This could be due to a malfunctioning button or an electrical problem.If youre unable to reset the oil light after trying the methods above, or if the light continues to illuminate, its best to consult a qualified mechanic. They can diagnose the underlying issue and provide the necessary repairs. Maintaining Your E90s Engine HealthRegular oil changes are essential for maintaining your E90s engine health. Here are some tips:Adhere to the recommended oil change intervals: Consult your owners manual for the recommended oil change intervals for your specific E90 model. Use the correct oil type: Use the type and viscosity of oil specified in your owners manual.Monitor your oil level: Check your oil level regularly, especially before long trips.While the oil light can be a source of anxiety, its ultimately a valuable tool for keeping your E90 running smoothly. By understanding the importance of the oil light, following the proper reset procedures, and maintaining your engines health, you can ensure a long and enjoyable driving experience with your beloved E90.Q: How often should I change the oil in my E90?A: The recommended oil change interval for a BMW E90 typically ranges between 7,500 and 10,000 miles. However, its best to consult your owners manual for the specific interval recommended for your model year and driving conditions.Q: What happens if I dont reset the oil light?A: Not resetting the oil light wont directly harm your engine. However, it will serve as a constant reminder that your oil needs attention. Additionally, some E90 models may restrict certain features or limit performance until the oil light is reset.Q: Can I reset the oil light myself?A: Yes, you can reset the oil light yourself using the methods described in this guide. However, if youre unsure or encounter difficulties, its always best to seek professional help from a qualified mechanic.Q: My oil light is blinking. What should I do?A: A blinking oil light is a serious warning sign that indicates low oil pressure. Immediately pull over to a safe location, shut off the engine, and contact a mechanic for assistance. Driving with low oil pressure can cause severe engine damage.Q: Is it better to use synthetic oil or conventional oil in my E90?A: Synthetic oil offers several advantages over conventional oil, including improved performance, extended drain intervals, and better protection at high temperatures. However, consulting your owners manual is crucial as it will specify the recommended oil type for your E90 model. S Sophie 4 months ago 1Answer My BMW E90's oil service light came on and I'm not sure how to reset it. I've looked through the manual but couldn't find the answer. Any advice on how to reset it? Reply Comments that are spammy, abusive, off-topic, contain profanity, contain personal attacks, or promote hatred of any kind will not be approved for publication. Hi Sophie, resetting the oil service light on your BMW E90 is actually quite easy. First, turn on your ignition without starting the engine. Press the odometer reset button until you see the service light indicator. Release the button and then press and hold it again until the text 'RESET' appears. Release the button and press it again to confirm the reset. Hope this helps! Last Updated on July 28, 2021 by ChristiHi, honey bunch! So here I just come to you with a short content on how to reset your service light for oil or for whatever other checks your engine can perform on a 2012 BMW 3 Series E46/E90/F30/G20. Well do this without any tools or scanner or computer or whatever.The reason why this is useful is that if you're like me and you change your own oil, then you'll want to reset the service indicator so that you know how far you've driven. So without further ado, lets get straight into it.Warning! Please note your vehicle model. This procedure applies to the 1997-2021 BMW 3 Series E46/E90/F30/G20 (316i, 318i, 320i, 323i, 328i, 330i, 335i, 340i, M3, 320e, 330e, M340i models).1997 BMW E46 (316i 318i 320i)I have done an oil change, and now I need to reset the service light, so its not coming up on my dash every time I start the car. So Im just going to show you guys how to reset it real quick to make your life a little easier. So basically, what you need to do is:With the ignition off hold down the TRIP button on the left side of instrument cluster for 5 secondsOnce you do that turn the key to position one while keep pressing the TRIP button and dont release itNow youll see Testing in the cluster. Keep it held and itll say RESET then the Reset will blink in the secondOnce its blinking you can let it go and press it again until Oil Service screen changes to END and its reset2005 BMW E90 (325i 328i 330i)First, put the key in and then press the START button once but dont press any pedalsThen you need to press and hold the TRIP button on the dash until you get the service symbolNow use the or button on the turn signal stalk to scroll up and down to see what exactly the service item you want to resetTo reset it, you gotta push the BC button on the end of the stalk and youll see the RESET comes up on the screenThen you need to push BC button again and hold it until the reset complete2012 BMW F30 (335i 340i M3)Time needed:3 minutesHere we have a 2017 BMW 3 Series, and were going to be doing the engine oil service reset. We had already performed the oil change, so now were going to reset the sensor reading for the engine oil. So the first thing youre going to do is:Turn on your carStart out by pressing the START button one time with your foot off of the brakeHold down the RESET buttonThen youre going to hold down the RESET button. Its the only button that controls the odometer cluster and located on the left side of the dash. So were pressing and holding now until theres going to be a service item comes upFind the Engine OilNow if you just press the Reset button briefly youll go through and youll be able to see the remaining resets possible for all the various things. So now youll find the item you want to reset. Because we want to reset the oil, we have to scroll until we find engine oilHold down the RESET buttonOnce you get that, you need to press and hold the Reset button to enter the reset modeRelease the buttonOnce the question mark pops up you can go ahead and let go the buttonHold down the button again to confirmThen youre gonna hold it again and then once it says reset in progress you can let it go and then just keep the car powered on until it says reset successful2019 BMW G20 (320e 330e M340i)In this chapter I will show you how to reset these service light and the different service options on a BMW 3 Series G20 from 2019 and onwards. So lets go ahead.So first you want your ignition to be in Diagnostic Mode and to do this you need to press the START button three times quicklyOnce youve done that your ignition should be on. And now you need to wait until Diagnostic Mode Active message appears on the screenAfter that, you need to push and hold the BC button on the left leverHold it down for a few seconds probably 17 seconds and you can scroll through all the settingsNow you can scroll the different service points using that same buttonSelect which one you want to reset and press and hold that same button for about 10 secondsWhen it says reset question mark youll just let off and then press the button again until it says reset successfulSo thats about it. I hope you enjoyed this content. Thank you for reading; you can leave a comment for any questions, and I will try to answer all of you. Until next time see you later.(Visited 1,124 times, 1 visits today) This article is visible to only you. Views this week: 0 Total views: 255 Thousand Author: iturgeon Resetting the service lights on a BMW is not explained in the service manual. When you take your car into the dealership for service, the techs use this menu to reset your car's display. If you are like us and prefer to work on your own car, the process can be a little tricky to figure out. So, here are the instructions I've compiled from a number of sources. Most of the videos for this procedure lack good instruction, so I'm hoping this will help everyone out. This procedure should work on the e82, e90, e92, and e93. Many people report success only after several repeated attempts. If your having trouble, be persistent and try again. Step by Step Instructions Getting into the Service Menu 1 Insert your key into the ignition 2 Without pressing down the clutch or brake pedal, press start/stop button. 3 Wait for the service reminder on the main display to disappear. 4 Immediately after the service light goes out, press hand hold the odometer reset. A warning triangle will appear, keep holding for another 2-3 seconds until the triangle disappears and the display changes to different service icon. If you hold too long and service menu icon disappears, start over. Resetting the Oil Service Warning Light 5 Use the up/down toggle switch on the turn signal indicator stalk to navigate through the service menu. 6 Navigate to the Oil Can symbol on the main center display. 7 Press the BC button on the end of the turn signal indicator stalk. The display bellow the oil can will show Reset. 8 Press and hold the BC button for 2-3 seconds and a clock animation will show up on the screen. Your oil service light has now been reset. Dackelone on 1Addicts.com 05-08-2010, 11:35 PM #1 Banned Drives: SLOW Join Date: May 2008 Location: LITTLEBIMMER.COM Guide to Reset the E90/E91/E92/E93 Service Indicator Lights I am going to show you how to reset your service lights with a simple YouTube video I made earlier. It requires no tools or anything, just a few buttons to press on your car and youre set. Which means you can DIY the service for your car. Here are the steps: Place a key in the ignition switch and press the start button. Wait until all check lights and beeping goes out. Put your foot on the brake pedal and hold odometer reset untill yellow triangle comes up. As soon as that happens; release it (odometer reset button) and use scroll on left side of steering wheel to find an icon that you want to reset service light for. Press the top button (BC button) on left control handle and reset light will come on. Press again and hold it for few seconds. That should do it. You can keep scrolling until you reset all that needs to be done. Once you are done take a keyfob out and you are ready to go! I hope this guide helps some of you guys when you do your own oil changes and stuff like that 05-09-2010, 08:02 AM #2 Brigadier General Drives: '09 335i Coupe Join Date: Jan 2008 Location: New England Very cool - thanks for sharing this! 05-09-2010, 01:41 PM #3 Drives: E90 Join Date: Feb 2009 Location: CA Cool! 05-17-2010, 08:45 PM #4 Enlisted Member Drives: 2007 335i Jet Black Join Date: Jul 2008 Location: Columbia, SC Great Post - took a couple tries to get the sequence right but in the end (3 minutes) worked perfectly!
