NAMEFRP file bypass.apk file size1.2 MB file typeapplication / vnd.android.package-file extensionapk downloads69526755 version2.0 Click here to download easy FRP BYPASS APK file FRP BYPASS APK; Google Factory Reset Protection Easily all And Android tablets that are performing Android 5.0, come with this security patch. To bypass the Android FRP block, two guides are available. You just need to follow the simple steps for FRP bypass. Mainly with this guide, you will be able to easily bypass the Block of Google FRP, if you have lost your device or forget the account password. For the first method for FRP bypass, you need a USB disk, an OTG cable and a PC. Once you have these requirements, follow Follow Steps: Bypass FRP with OTG first of all, you need to download the APK Bypass FRP from our official website. You can check the download link below. After downloading the file, copy the APK Bypass FRP to your USB unity. Now your Android device starts on which you are facing the FRP problem. Subsequently, you will open an installation wizard where you need to follow the basic instructions. Once the bypass factory protection protection screen is displayed. You will need to enter the access credentials to the Google account. But because of the reason why you missed your phone or reminds you of it, you'll have to try something else. Now using an OTG cable, you need to connect a USB pen unit to your Android device. Then you will see the opening of the files explorer to your Android phone. Then open the folder on your Android device where you saved the APK Bypass FRP file. During the installation process, the phone will block the installation and you may see an error of unknown source. Just go to your device settings and activate the unknown Scores option. Now touch the installation button again to start the installation process. After completing the installation, tap Open and open the Settings menu. In Settings Scroll down, select the backup and restore the option. Then touch the restoration of the factory data and touch the Confirm button. This to !! You have successfully climbed up the Google factory restoration protection on your Android device. Now you have to restart your device and you no longer have the FRP bypass problem in front. After restarting your device, it's the choice to add a Google account or skip it. REQUIREMENTS APK BYPASS FRP APK Android Lollipop device or on Android version. Internet connection working for downloading the required files. Windows PC How to bypass Google factory reset protection without OTG The first method we shared above requires OTG cable along with Google Bypass factory recovery protection file. But with this method, you don't need to use OTG. Because we will use the FRP bypass tool, then make sure you have a working internet connection. So it started: First of all, you need to turn on your Android device. You will see an installation wizard. Follow the instructions on the screen, once the FRP bypass tool screen is displayed. You will need to open the keyboard and touch your settings. Subsequently, you need to touch the Menu button and then the Help and Feedback button. Subsequently, you have to type whatever you want to write and choose the option A € â, ~ â "Share". Then choose the messaging option, then the new message and type any number in the section A € â, ~ â ". Then choose and touch the contact icon. Then touch the call icon button and tap the new call option. Once the dial opens, you need to type * # * # 4636 # * # * Now touch the Statistics Statistics option and touch the Back button. Then go to the settings menu. So you need to touch the backup option and restore. Select the restoration of factory data and confirm it. That's it, Guys !! You have successfully ignored the verification of the Google account using the FRP bypass tool. The screenshots of this guide are attached so that it will be easier for you to follow these steps. I hope these two methods help you cancel your doubts about bypassing the Google factory restoration protection. Personalized Binary block of FRP correction When a user briar the Samsung device, a custom binary block is automatically applied. This means by setting Bypass FRP is activated. So your phone access is also blocked personalized recovery. If you are facing this problem, you need to follow the instructions provided below. Make sure you have Odin 3 downloaded and running on PC. Next, follow these steps: First of all, you need to download the tool from here. After this unzip and install it. Subsequently, you will need to choose your Samsung device and hold the Home button, the power button and the volume button buttons. So you will notify a system software update. In progress for the Software Updates option, you will need to keep the Volume Up button. Now open Odin. Odin. Tool and connect your Samsung device with the PC. Once the device is automatically detected, you need to select the zip files from the file you downloaded above. Next Touch the Start button and update the device software version started. Once the process end, it is necessary to disconnect the device and restart it. Keep in mind, allow you to update your system to install the necessary things, so wait for a few minutes. Using this method, you will be able to unlock the Bypass factory restoration protection block. This to !! Now your custom Binary Binary block problem is completely fixed.
