The Libraries Suite 2022 key continues to support the features described in previous versions but with the following changes. Bug fixes: updated VISA-COM rear compatibility problem. What is new?: Added support for Thunderbolt port connection with VNA products from the VNA series of P50xB/P93xB. Please refer to the release notes P50xxB & P93xB for a list of supported PC models for this Thunderbolt Port connection. Known Questions: You need to install the VNA software before connecting the P50xxB/P93xB Streamline Series VNAs, or else the chassis can appear under the PXI10 interface in Connection Expert. Note on. NET Framework 3.5/2.0 and known numbers: Just like Keysight IO Libraries Suite 2021, users are no longer required to install. NET Framework 3.5/2.0 when operating the installer version. exe /s /z"tipicale;net35" If users want to use VISA. NET drivers that are supplied by the IVI Organisation rather than Keysight Technologies, Inc., so they have to install. NET Framework 3.5/2.0. You may need to install. NET Framework 3.5 for 32-bit VISA applications for working. Keysight Secure Instrument Communication provides a safe way to control the tools using the HiSLIP protocol revision 2.0 (r2). HiSLIP r2 allows secure connections, which are reached using Transport Layer Security (TLS) for encryption and decryption. HiSLIP r2 also allows authenticates its identity by sending an X.509 certificate to the client (VISA book) when the TLS connection is established. The authentic server client a SASL (Simple Authentication and Security Layer) mechanism supported by the server. The challenges to establishing a secure connection are: how to provide the required certificates and authentication, authentication, to authenticate server/client in a reciprocal way, and how to configure server/client in a compatible way, etc. To overcome challenges and support secure communication (SIC) Expert to configure both test tools and test stations to perform safe communication. Keysight Secure Instrument Communication Expert (SIC Expert) Release Date Version Description 2021-07-232021 Update 1 Please see the description and ReadMe for this Build 18.2. 27115.0 Notified Date Version 2021-07-23 2021 Update 1 Version Description and ReadMe for this Build 18.2. 27115.0 Keysight IO Libraries Suite 2021 Update 1 continues to support the features described in previous versions but with the following changes. Fixed defects: Fixed some problems related to the PXI system (while it is connected). Known Questions: There is a problem of backward components 7.1 and Keysight Instrument or Measurement software using the IVI-COM drivers of the tool. If you have this set, do not update IOLS 2021. IOLS 2020 U1 that has VISA Shared Components 5.12 does not have this problem. We're currently working with IVI. org and other test and measurement providers to solve the problem. Note on. NET Framework 3.5/2.0 during Users can choose to install. NET Framework 3.5/2.0 when running the installer in silent and with an additional command line switch. For example: IOLibSuiteInstaller version. exe /s /z"tipicale; net35" If users want to use The drivers provided by the organization IVI instead © by Keysight Technologies, Inc., and must install the .NET Framework 3.5 / 2.0 when running the installer version. 2.0. You may need to install the .NET Framework 3.5 for VISA applications to 32-bit to work. Communication SECURE Security Tools provides a safe way to control the tools using the revision of HILLIP 2.0 (R2 protocol). Hislip R2 Enables secure connections, which are obtained using the security of the transport layer (TLS) encryption and decryption. HisLip R2 also enables authenticate your identity by sending an X.509 certificate to the client (VISA Library) when the connection is established TLS. The client authenticates the server (instrument) will authenticate your identity by sending an X.509 certificate to the client authenticates the server. The challenges for establishing a secure connection are: how to provide the required certificates and authenticate the server / client, etc.. To overcome challenges and support secure communication between instruments and test stations, Keysight provides updates to certain instruments and keysight IO Libraries Suite. Keysight Instrument System is composed of three main elements: Keysight tool that supports SIC Keysight IO Libraries Suite (installed on the test station) Instrument Keysight Secure Communication Expert (Expert Sic) Release Date Description 2021 Version 20 this Build 18.2.26526.0 Keysightà & IOÃ & Suite Libraries 2021 adds support for secure instrument communication: Hillip support (IVI-6.1) Revision 5.1 Another important change included is that users are no longer forced to install .NET Framework 3.5 / 2.0 during installation. Users can choose to install it when performing the installer. However, if users want to use VISA.NET drivers provided by the organization ivi rather than by Keysight Technologies, Inc., then they must install .NET Framework 3.5 / 2.0. Defective corrections: solved an interoperability problem of the PXIE module. With this correction, Keysight Visa can properly manage the PXIE modules of other suppliers when Keysight PXI Resource Manager is not active. Correct a problem with VISA shared components 7.1 and Keysight Instrument or Measurement Software using the instrument's IVI-COM drivers. If you have this configuration, you don't upgrade to IOLS 2021. IOLS 2021 U1 that Visa shared components 5.12 has no problem. We are currently working with i.org and other test providers and measures to solve the problem. We are currently working with i.org and other test providers and measures to solve the problem. of the HISLIP (R2) protocol. Hislip R2 allows secure connections, obtained using the Transport Layer Security (TLS) for encryption and decryption. Hislip R2 allows secure connections, obtained using the Transport Layer Security (TLS) for encryption and decryption. Hislip R2 allows secure connections, obtained using the Transport Layer Security (TLS) for encryption and decryption. authenticated to the server using a SASL (Simple Authentication and Security Layer) mechanism supported by the server. The challenges to establish a secure connection are: how to provide requested certificates and authentication information, how to authenticate server / client, such as server/client in a compatible way, etc. To overcome challenges and support secure communication between tools and test stations, Keysight is Updates of some tools and keysight I Libraries Suite. Keysight also provides a configuration tool called Keysight Secure Instrument The communication system consists of three main elements: Keysight tool that supports SIC Keysight I Libraries Suite (installed on the test station) Keysight Secure Instrument Communication Expert (SIC Expert) Release date Version 2020-10-15 2020 Update 1 Version Description See description See description See description above. Build 18.1.26 209.5 I Libraries Suite 2020 The update 1 offers two important changes compared to the previous version: corrects the process of discovery of the 1394-VXi interface when the VXI system uses MXI connections. It corrects memory loss problems in the Thesight Instrument Discovery Service and LXIMDNSBrowser. The remaining improvements of this list have been made for I LibraRies Suite 2020. General performance improvements. Shared components VISA â € "Update to 5.12. Support for GPIB drivers with Windows 10 Device Guard. Bug fixes and minor improvements including: when NI is the primary resource manager, Connection Expert now reports all the NI PXI modules. On systems with NI Visa, a complete repair operation. When the NI PXI system module is used with Keysight Resource Manager as the primary resource manager, the complete address of the system module is used with Keysight Resource Manager as the primary resource manager, the complete address of the system module is used with Keysight Resource Manager as the primary resource manager, the complete address of the system module is used with Keysight Resource Manager as the primary resource manager, the complete address of the system module is used with Keysight Resource Manager as the primary resource manager, the complete address of the system module is used with Keysight Resource Manager as the primary resource manager, the complete address of the system module is used with Keysight Resource Manager as the primary resource manager, the complete address of the system module is used with Keysight Resource Manager as the primary resource manager. tools is updated correctly. The status check on a LAN tool is completed without interrupting the instrument detection. Serial doors, were not displayed in Connection Expert in certain configurations, are now visible. After an updated correctly. State control over a LAN LAN instrument without interrupting the discovery of the instruments. Serial ports, which were not displayed in Connection Expert in some configurations, are now visible. Version description 2020-02-07 2020 See description Expert in some configurations, are now visible. Version of release date version 2020-02-07 2020 See description. Build 18.1. 25310.1 IO Libraries Suite194; 160; 2020 offers several improvements: general performance improvements. VISA Shared Components - Update to 5.12. Support for GPIB drivers with Windows 10 Device Guard. Bug fixes and minor improvements, including: When NI is the main resource manager, Connection Expert now reports all NI PXII194; 160; 194; 160; modules. On systems with NI VISA, a complete installation repair operation. When the NI PXI system module is used with Keysight Resource Manager as the main resource manager, the complete address of the system module is now reported correctly. Serial instrument detection is fixed. After an update, the list of GPIB tools is correctly updated. Check the status of a complete LAN tool without interrupting the discovery of the tool. Serial ports, which were not displayed in Connection Expert in some configurations, are now visible. Release of the version 2019-07-23 2019 Update 1 Version Description See description above. Build 18.1. 24715.0 IO Libraries Suite194; 2019 Update 1 provides several improvements: upgraded USB-PXI discovery to better manage slow initialization of modules. AXie chassis support enhanced. The support of Visual Basic 6 SICL libraries Suite194; 2019 Update 1 provides several improvements: upgraded USB-PXI discovery to better manage slow initialization of modules. AXie chassis support enhanced. Connection Expert reporting floating PXI modules. Release date version 2019-02-02 2019 See description above. Build 18.1. 24 130.0 IO Libraries Suite194; 160; 2019 provides provides Improvements: improved detection functionality: software server: IO Libraries suite can now discover the measurement software server without any user interaction. Discovered software server will be displayed in Connection Expert tool visualization. hardware server: IO Libraries suite now discovered software server will be displayed in Connection Expert tool visualization. SCPI communication, providing an additional visa address in the modular details of the tool. Connection Expert Now displays more details about the PXIE tools that have multi-slot, multi-link or multi-slot, multi-link or multi-slot, multi-link or multi-slot, multi-link or multi-slot, multi-slot It is the date version Description 2018-04-20 2018 Update 1 See Description above. Table 18.1. 23218.2 Release date 2018-04-20 2018 Update 1.0 Provides several improvements: support for E1406A GPIB to VXI on Windows 7 and Windows 10 includes the following shared components of IVI Foundation: Shared components VISA 5.10 IVI Shared components 2.5 IVI. NET Shared components 1.4 IO Installer Libraries is now a single executable and not a zip file. Update of the release date 2018-01-31 2018 Update 0.2 Version Description See description The Chassis Expert Connection card showed incorrect addresses for some PXI modules (47615) The connection expert has not been able to set the LU values of 14, 15, 17 or 18 on USB adapters / GPIB of KEYSIGHT USB / GPIB Visa Keysight connections succeeded when using protocol VXI-11.2 (47877) is Release date Version Description 2017-11-15 Update 2017 0.1 See description below. Table 18.1. 22713.0 Release date 2017-11-15 2018 Update 0.1 Version Description See description below. Construction 18.1. 22713.0 Several faults have been identified, including: Connection Expert locks on the loading tools... Screen (46901) The connection expert locks down if Internet access has not been available (47661) Automatic scanning of PXI devices, after initial startup, after init See description below. Build 18.1. 22603.1. IO Suite 2018 Library adds support for the following features: E8491b Firewire to VXI on Windows 10 A number of defects have been fixed, Among which: Problems that have caused crashes in: Connection Expert (44266, 44271, 44274) Various services I/O and tools when "FIPS Compatible Algorithms" has been enabled (44410) IO interactive IO if too much data has been transferred (46070) Resource management PXI if faulty PXI drivers (45871) have been detected some problems where the IO monitor could display different timestamps if a registry is opened on different systems (41227) a PXI problem where aliases have been returned only if they were defined in the form Legacy "of the VISA (44140) update visa problem The active PXI resource manager could cause additional providers to block the Configuration file in Incorrect way (41367) Various other defects, the following improvements have been made to direct defects: the PXI resource manager now MONI TORS for new devices for 5 minutes after startup (44265) added an option in I monitor monitor after startup (44265) added an option in I monitor monitor for the clipboard (41272) added an option in I monitor monitor for the clipboard (41272) added an option in I monitor monitor for the clipboard (41272) added an option in I monitor monitor for the clipboard (41272) added the possibility of copying data from the IO monitor for the clipboard (41272) added an option in I monitor monitor for the clipboard (41272) added an option in I monitor for 06-14 2017 Update 1 See the description below. Build 18.0.22209.2 Output date Version 2017-06-14 2017 Update 1 version Description See description below. Build 18.0.22209.2 I Libraries Suite 2017 includes the following features: solved several stability problems that could cause Connection Expert crash. Fixed a problem where LAN connections would open twice more, as needed. Fixed a problem in which the aliases did not work on all the PXI addresses. Fixed a problem in which the PXI Resource Manager. See the text for the complete list of defect corrections Output date Version Description 2017-03-22 2017 See the description below. Build 18.0.21916.2 I Libraries Suite 2017 includes the following features: Newly redesigned user interface to quickly reach the most common activities Simplified operating model to ensure common tasks are easy to find and use I updated monitors to allow filtering for address Release Version Description 2016-10-26 17.3.21412.2 Version Description above. 17.3 - See description above. 17.3 Includes the following features: Peer to Peer (P2P) support for streaming allows data transfer between two PXI modules without data being transmitted via the host controller. This minimizes the latency of data transfer between two PXI modules without data being transmitted via the host controller. This minimizes the latency of data transfer between two PXI modules without data being transmitted via the host controller. This minimizes the latency of data transfer between two PXI modules without data being transmitted via the host controller. improvements and defects corrected as necessary. Release date Version Description 2016-04-23 17.2. 20818.0 Suite 17.2 Update 2 - see description below. Corrected a problem of compatibility NI-VISA so max sometimes reported a "Errore VISA" when I libraries suite 17.x was installed on the same system. solved a problem with the connection expert chassis trigger interface where blue arrows did not work as expected. ... 17.2 Update 1 included the following corrections: on some systems I libraries suites 17.x was installed on the same systems. has been solved. on some connection expert systems it was blocked when it was launched. This problem has been corrected in the VISA guide file. NET. ... as well as all I libraries suites 17.2 features: I keysight i keys suite libraries is now supported on microsoft windows 10 (including windows 10 home, pro, enterprise and education.) the new VISA.NET bees has been designed specifically for languages that conform to cls .net as c# and VB.NET. consult the new VISA.NET guide, available from I control, for details on VISA. NET. keysight connection expert includes a new chassis view trigger, where you can book pxi trigger lines and create paths. keysight io keys libraries 17.2 includes shared components visa 5.6.0 of the i libraries suite 17.2 also offers improvements in performance and stability, instrument detection is now a two-phase process to reduce the actual time of start, â release date version description 2016-02-10 17.2.20 605.2 suite 17.2 update 1 - see the description above. 17.2 update 1 - see the description above. 17.2 update 1 includes several correctionsOn some Libraries Suite 17.2 systems would not be installed. This problem has been solved. On some Connection Expert systems it crashed when it was launched. The issue was An alias is now automatically created for each newly discovered USB tool. Several errors have been fixed in the Visa.net Help file. ... as well as all IO Suite 17.2 libraries Features: Keysight IO Libraries Suite is now supported on Microsoft Windows 10 (including Windows 10 Home, Pro, Enterprise and Education). The new Visa.net API is designed specifically for .NET CLS compatible languages such as C# and VB.NET. See the new Visa.net Guide, available from IO Control, for details on Visa.net. Keysight Connection Expert includes a new frame trigger view, where you can book PXI trigger lines and create paths. Keysight IO Libraries Suite 17.2 Includes VISA Shared Components 5.6.0 IO Libraries Suite 17.2 also provides improvements 5.6.0 and VISA.NET Shared Components 5.6.0 IO Libraries Suite 17.2 also provides improvements 5.6.0 IO Libraries Suite 17.2 also provides improvements 5.6.0 and VISA.NET Shared Components 5.6.0 IO Libraries Suite 17.2 also provides improvements 5.6.0 IO Libraries Suite 17.2 also provides I 2016-01-05 17.2.20 407.0 Suite 17.2 - See description below Release date Version 2016-01-05 17.2.20 407.1 Version Description Suite 17.2 - SEE DESCRIPTION UNDER KEYSHTS IO Libraries Suite is now supported on Microsoft Windows 10 (including Windows 10 Home, Pro Enterprise and Education). The new Visa.net API is designed specifically for .NET CLS compatible languages such as C# and VB.NET. See the new Visa.net. Keysight IO Libraries Suite 17.2 Includes VISA Shared Components VISA IVI VISA

Components 5.6.0 and VISA.NET Shared Components 5.6.0 IO Libraries Suite 17.1 also provides improvements in performance and stability. Discovery of the tool is now a two-step process, to reduce the effective time of Release the date version Description 2015-08-21 17.1. 20011.4 Suite 17.1. Update 1- See details below. Date of issue 2015-08-21 17.1. 200111.4 Version Description Suite 17.1 Update 1- see details below. In many cases, the performance of instrument discovery has been improved. The connection expert now automatically detected (e.g. Keysight N9330B). Previously, in some cases, IO Libraries Suite would have changed the settings of Windows serial ports even if no serial device was connected. This has been resolved. Now, the settings will only be updated when you change the sertings in Connection Expert and save the modified settings. The Preferred Filter setting is now remembered by one session of connection experts to another. The Preferrite filter is the grey or golden star at the top of the star column in the list of Connection experts to another. The Preferrite filter is active (gold star), only the preferred instruments (with gold stars) are displayed. Many other defect corrections have to do with speed and stability. Release Date Version Description 2015-02-07 17.1. 19313.5 Suite 17.1 - Enables the use of Multi-Module tools in Connections, includes IVI Shared Component VISA 5.5. 0. Version Description Suite 17.1 - Enables the use of Multi-Module tools in Connection Expert, various defect corrections, includes IVI Shared Components 2.3. 0, and shared component VISA 5.5. 0. Release of the version of the date Description 2014-10-24 17.0. 19013.0 Suite 17.0 -All new connection experts, automatic discovery, PXI improvements (PXI-2012 and multi-vendor interoperability).
