## Avi to mp4 converter app for android

By Kristen Waters The Mplayer program includes a utility for converting multimedia from one format to another called MEncoder. The MEncoder utility can be used to convert AVI video files to MP4 format from the command line. The resulting video can be played on Apple iPod and other portable devices. The MP4 format is based on the format of the Apple Quicktime container. MP4 can contain only audio, or audio and video together. However, the standard is to use MP4 to refer to video files and M4A to refer to only audio files. Download and install MPlayer through the distribution software repository, or from the MPlayer website. Type the command "mencoder input.avi -o output.mp4 -oac copy -ovc lavc -lavcopts vcodec=mpeg1video -of mpeg" to convert AVI video to MP4. Type the "mplayer output.mp4" command to test the video. Type the "out" command to close the terminal session. By Stephen Lilley Although it is not primarily designed for this purpose, Nero Vision (a program included in Nero Burning ROM) can be easily used to convert a computer video file from one format to another. Nero Vision has a sub-function that acts as a standard video file editor (such as Final Cut Pro or Adobe Premiere), so if you want to convert an MP4 file to the AVI file format you import it as MP4, then export it as AVI. Open Black Vision using its "Start" shortcut icon. Click the "Browse for Media" button to search for your computer for your MP4 file. Once selected, the file is addedthe list "Media Files" at the top of the screen. Click and drag it into the "Timeline" at the bottom of the screen. Click "Export Film". Click "Export video to file" and make sure "AVI" is selected from the drop-down menu. Click "Export" to convert MP4 video file to AVI file format. Android has been around for more than a year, and at that time developers have mounted some great apps. Whether you are a new Android owner or a professional looking for new tools, these 10 great and free apps belong in your arsenal. Pictures of Iwallenstein. We are going to jump directly on applications that are simply so common, universal and well replicated on the iPhone or other mobile platforms that a user with a need probably hunts them down—Facebook, Yelp, Evernote, Remember the Milk, and endless Twitter client, widgets and applications. We also jumped over their clean Google apps, such as Google Voice, Navigation and Eyelets, which are (or will be) included standards on new Android phones. Instead, we are aiming to shine a little light on applications that quietly offer excellent features for those who download them. Update: I moved TaskKiller Free to a lower ranking, and modified its entry description a bit, after some further research, stimulated by some comments and emails of Andro-savvy. 10. LayarIn some ways, this is a vote for the potential of Layar as much as the practical question. Walking with the phone and seeing Wikipedia subjects, apartments for sale, and what Twitter users haveabout through your phone is a fairly clean, and potentially useful thing when you are looking for things to do in a new city. But while Layar continues to add new layers, and as camera and mobile processing power continue to improve, Layar could become much more interesting than it is already. One thing worth mentioning is that if you don't like the view of the 3D camera, or as the appearance of yourself while using, Layar can only show points of interest on a Google-type map. Either way, it's an intriguing look at what's happening right around the corner. (Original post) Phone / Android: Layar, the mobile app that overlaps data markers on what the phone camera sees,... Read more9. Listen up to the last update, we couldn't really call Listening to a king between the podcast apps - he had some irksome bugs, one of them is the loss of episodes and sometimes subscriptions. Now, however, the Google app does a great job not only to find audio content, but it exports your subscriptions to manage in Google Reader, ensuring a full backup of feed and an easier recovery of past episodes you want head back and feel. If you need a more refined podcast control, try ACast, but listen will work for most. (Original post)The Android market continues to grow, new phones are coming to each carrier, but finding the Reader more8. AnyCutYou can drop a lot of clean things on your Android home screen, but you can not enough get a click of access to everything in your phoneand extra. AnyCut does not have a great interface, and it could take a little test and error before you get to what you are looking for. Soon, however, you will have access to the deepest guts of your settings, then turn on and off 3G, allowing localization services and other tricks are easy to pull out. (Original post) Click to view You have already seen our hands-on review of Google's new mobile operating system,... Read more7. Secrets There is no sync browser on Android —yet (via, Mozilla, get on that Firefox Mobile!). Meanwhile, there is Secrets, a safe, KeePass compatible, master-password-locked vault for all passwords. It is not so difficult to export your passwords from your desktop or laptop to your SD card, and with full-text search finally implemented, Secrets is much cheaper for those oh-shoot-what's-that-username-again moments. (Original post)Android only: Today Google announced the release of Secrets, a secure password manager for Android... Read more6. Free TaskKiller The negative side of Android multi-tasking is that sometimes, some apps can become unexpectedly memory or bandwidth, or bring your phone down with them when crashing. Few applications provide a direct, easy "Quit" option, however, and sometimes you can't get to the app to close it. Enter TaskKiller, a free utility for killing apps that works from its standard icon, or as one of a number of widgets you can add to the home screen for saving a click system. Freeneeds ads and lacks some advanced features, but typically serves the needs of anyone who is sick of need to reset their phone only to free up space for, you know, phone calls and the like. Note: This application should be used as more than one last resort than a regular maintenance tool — kill processes and willy-nilly applications can turn off alarms, kill background synchronization, and have other unintended consequences.5. Skreen You use your Android smartphone differently from your desktop computer. You do not work with files and shortcuts, as much as you experience on the data flows you are interested in — emails, text messages, Facebook and Twitter, chat and the like. SlideScreen replaces, or just increases, if you would like, the home screen of your phone, creating row after row of messages and feeds. Slide the center information bar up and down to look more or less of your articles, scroll right to reject items as bed, and revel in having all your data at hand. SlideScreen also replaces the standard application tray, giving you 8 slots to put your applications more frequently accessible, and tucking all others into a rolling deck below. It is a total makeover for your phone, in other words, one that could simply make you fall in love again with the concept of mobile data. (Original post)Android: The default home screen in Android is fine and most functional. SlideScreen, a...Read more4. Shopper Okay, at first we were pretty skeptical of Google's Shopper app, since it looked likea Google's own glasses mashup and barcode-smart apps like ShopSavvy. Then we actually used Shopper, and were amazed both how exactly it collected both bar codes and simple cover shots, and how fast it worked. Apparently, according to a developer who appeared on this week in Google, Shopper is actually loading image data to Google servers as it captures it, and decodes right bar codes on the phone. The speed for the good of speed is beautiful, of course, but it is pretty good not to have to stand in front of a book display for a whole two minutes, waving the phone around a lot of books you are looking for competitive price. Shopper answers the question "Can I buy this cheaper" and responds quickly. Android: Google has already had visual search glasses, and the Google Shopper mobile site can work. . Read more3. PDANetPDANet is the easiest way to use cell phone connection as a makeshift internet access point, for those difficult situations when it is enough to get online somehow, in any case. The free version always offers basic internet access, but limits secure site connections after a trial period. The paid version is not cheap (\$30), but it is the simplest of the three ways we know how to tie an Android phone. For the cost of nothing, we will take some basic navigation of the website - why, hey, you can't get to Gmail on the phone if you really need it? (Original post)There are three ways to tether your Android laptop and get sweet internet love even whereMore2. WaveSecure This is free until March 31, so make sure you jump on it if you think there is also a remote possibility that you will want some killer security tools available. WaveSecure not only supports contacts, SMS messages, photos and videos, and other developer's cloud files for subsequent restoration if your phone gets lost, but can lock a phone when stabbing for a while, locate a phone with GPS or triangulation text message (seriously.) and, as a final option, pull out a total and complete remote cleaning if you fear that everything is lost. Powerful peace of mind, especially for the price. (Original post)Android/Windows Mobile/Symbian: If your phone is lost or lifted, WaveSecure, currently... Read more1. ASTRO File Manager This is one of those apps that you hopefully get a little attention if just to be purchased from Google or otherwise integrated into the basic software of your phone. ASTRO File Manager does a great job to allow you to browse files on SD card and accessible internal memory, secure, but also has its own built-in killer task, backs up applications, can send files as email attachments (not all that easy or intuitive from the mail client, for some reason,) and much more. It is the Leatherman of Android utilities, and a must-have on any serious geek phone. To each of them, of course, but we would like to hear which Android apps you consider crucial to your phone in comments. We tend to free, but if you have found a cheap app that is worth someour readers who love Android, and developers, would probably be happy for referral. referral.
