Mac was released on October 26, 2010.Office 2010 introduces user interface enhancement tasks into a single location. The ribbon introduced in Office 2010 and is now
customizable.[8][9][10] Collaborative editing features that enable multiple users to share and edit documents;[11] and security improvements such as Protected View, a sandbox to protect users from malicious content[12] are among its other new features. It debuted
Office Online, free Web-based versions of Excel, OneNote, PowerPoint, and Word.[13][14][15] A new Office Starter 2010 edition replaces Microsoft's mobile productivity suite was released on May 12, 2010 as a free upgrade from the Windows Phone Store for Windows Mobile 6.5 devices
with a previous version of Office Mobile installed.[19][20][21]Office 2010 is the first version of Office to ship in a 64-bit version to require volume license product activation.[24][25] Office 2010 is compatible with Windows Server 2016.
[26][27] It is the last version of Microsoft Office to support Windows XP SP3, Windows Server 2003 SP2, Windows Vista SP1+ and Windows Server 2008.[28][30][31]Reviews of Office 2010 were generally very positive, with praise to the new Backstage view, new customization options for the ribbon, and the incorporation of the ribbon into all
programs.[32][33] Sales, however, initially were lower than those of its predecessor.[34] Despite this, Office 2010 was a success for Microsoft, surpassing the company's previous records for adoption, [35] and revenue for Office.[36] As of December 31, 2011, approximately 200 million licenses of Office 2010 were sold, [37] before its
discontinuation on January 31, 2013.[38] Mainstream support for Office 2010 ended on October 13, 2020, the same dates that mainstream and extended support ended for Windows Embedded Standard 7.[39] Office 2010 is the last version of Office that can be activated without enrolling in a Microsoft
account; enrollment for activation is required starting with Office 2013.[40] On June 9, 2018, Microsoft announced that its forums would no longer include Office 2010 or other products in extended support among its products for discussions involving support.[41] On August 27, 2021, Microsoft announced that Outlook 2010 and Outlook 2007 would
be cut off from connecting to Microsoft 365 Exchange servers on November 1, 2021.[42]Development started in 2007 while Microsoft was finishing work on Office 12, released as Microsoft Was finishing work on Office 12 (then called Office 14)
would ship in the first half of 2009.[44]On April 15, 2009, Microsoft confirmed that Office 2010 would be released in the first half of 2010. They announced on May 12, 2009, at a Tech Ed event, a trial version of the 64-bit edition.[45][46] The Technical Preview 1 (Version: 14.0.4006.1010) was leaked on May 15, 2009.[47]An internal post-beta build
was leaked on July 12, 2009. This was newer than the official preview build and included a "Limestone" internal test application (note: the EULA indicates Beta 2).[48] On July 13, 2009, Microsoft announced Office 2010 at its Worldwide Partner Conference 2009.On July 14, 2009, Microsoft started to send out invitations on Microsoft Connect to test an
official preview build of Office 2010.[49] On August 30, 2009, the beta build 4417 was leaked on the internet via torrents.[50]The public beta was officially released to the general public at the Microsoft Office
Beta website, which was originally launched by Microsoft on November 11, 2009 to provide screenshots of the new office 2010, Microsoft launched an Office 2010 application
compatibility program with tools and guidance available for download.[54] On February 5, 2010, the official release candidate build 4734.1000 was available to Connect and MSDN testers. It was leaked to torrent sites.[55] A few days after, the RTM escrow build was leaked. Microsoft announced the RTM on April 15, 2010, and that the final version
was to have speech technologies for use with text to speech in Microsoft OneNote, Microso
Licensing Customers on May 1.[57] MSDN and TechNet subscribers have been able to download the RTM version number is 14.0.4763.1000.[58][59] Office 2010 was launched for general customer availability on June 15, 2010.[7][60]Service packVersion number is 14.0.4763.1000.[58][59] Office 2010 was launched for general customer availability on June 15, 2010.[7][60]Service packVersion number Release dateService Pack 1
(SP1)14.0.6029.1000[61]November 17, 2010[62]Service Pack 2 (SP2)14.0.7015.1000[61]April 8, 2013[63]Microsoft released two service Pack 1 (SP1) and Service Pack 2 (SP2) were released concurrently with updates for additional products including Office Online,
SharePoint, and SharePoint Designer.[62][63]On November 17, 2010, Microsoft invited a select number of testers at the Microsoft on June 27, 2011, and included compatibility, performance, security, and stability improvements. SP1 is a cumulative update that includes all
previous updates, as well as fixes exclusive to its release; [62][66] a list of exclusive fixes was released by Microsoft. [67] SP1 also introduced the ability to open notebooks stored in OneDrive directly from within the app itself,
while Outlook 2010 SP1 introduced Microsoft 365 support. [66] With the release of SP1, the use of Office 2010 SP2 was a cumulative update officially released on July 16, 2013, and Internet Explorer 9 was officially supported by Microsoft for the first time. [68] On April 8, 2013, a beta build of Office 2010 SP2 was released on July 16, 2013, and Internet Explorer 9 was officially supported by Microsoft for the first time.
included all of the previously released compatibility, performance, stability, and security fixes, as well as numerous exclusive fixes;[63] a list of fixes exclusive fixes, as well as numerous exclusive fixes;[63] a list of fixes exc
2013.[63][71] Because SP2 is cumulative, SP1 is not a prerequisite for its installation.[72]In both its client programs and in its Internet implementation, the design of Office 2010 is more "role-based" than previous versions of Microsoft Office, with specific
features tailored to employees in "roles such as research and development professionals, sales people, and human resources."[75]The Info tab in the navigation pane of Backstage displaying a document overview alongside management tasks in Word 2010.A new Backstage view interface replaces the Office menu introduced in Office 2007 and is
designed to facilitate access to document management and sharing tasks by consolidating them within a single location. [76] In theatre, backstage view is accordingly an interface dedicated to activities and preparations before saving or
sharing a document.[77] Backstage consists of both a left-hand navigation pane and an adjacent main pane; the navigation pane includes a series of vertically arranged common commands to open or save files, and tabs that, when opened, expose document management tasks and contextual information within the main pane.[76][78] A customizable
number of recently opened documents can also be displayed within the navigation pane. [79] Tasks that are accessed via tabs in the main Backstage pane are categorized into separate groups that display contextual information relevant to that specific tab. On the Info tab in
Word, for example, document metadata details are displayed within the Prepare for Sharing group to information was included within the Prepare for Sharing group to information and product licensing status.[81] In Office 2007, this information was included within
separate locations.[80][81] From the Info tab, users can access revisions of currently open Excel, PowerPoint, and Word documents, as well as the latest unsaved version of a document that was previously closed.[82] Within the Print tab, Backstage also combines the previously separate print and print preview features by displaying printer tasks,
settings, and a zooming user interface to preview the currently open document without the user having to open a dialog box.[83]Backstage is extensible; developers can add their own commands, tabs, tasks, or related information.[84][85][86]The File tab replaces the Office button introduced in Office 2007 and offers similar functionality. The previous
Office button around button adorned with Fitts's law.[79][87] Microsoft Office 2007 interface and was positioned away from the microsoft of the screen in accordance with Fitts's law.[79][87] Microsoft stated this button enhanced the usability of
Office, but many users saw it as "branding decoration, rather than a functional button." As a result, in Office 2010 it was replaced with a File tab is colored on a per-app basis (e.g., it is colored orange in Outlook). Opening the File tab
displays the new Backstage view.[88]Office 2010 introduces a pasting options gallery on the ribbon, in the context menu, and in the object-oriented user interface that replaces the Paste Special dialog box and Paste Recovery feature seen in previous versions of Office. The gallery introduces Live Preview effects to the paste process when users
position the mouse cursor over an option in the gallery so that the result of the process can be previewed before it is applied to the document; a tooltip with an associated description and keyboard shortcut for that option will also appear. If users position the mouse cursor over a gallery option in the context menu, the rest of the context menu.
becomes transparent so that it does not obstruct preview results within the document. To facilitate keyboard-based paste operations, users can navigate the gallery options change based on the content in the clipboard and the app into which
the content is pasted.[89]The ribbon introduced in Office 2007 is fully customizable and included in all programs in Office 2010.[8][9] Users can add or rename custom ribbon tabs or groups, add additional commands to the default tabs, and hide tabs that are not used. Users can also export or import any customization changes made to the ribbon to
facilitate backups, deployment, or sharing, or reset all ribbon customizations. [90] The ribbon was also updated with a visible interface option to minimize it, which leaves only the tabs exposed. [91] After the launch of Office 2010, Microsoft provided free downloads for a new Favorites tab that consolidated commands based on customer feedback
regarding the most frequently used commands in all Office 2010 is silver instead of blue as in Office 2010. The new icons are based on colors that correspond to their
respective programs, as per previous releases, with an increased emphasis on app letters.[88]The Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen in Office 2010 splash screen has been redesigned from the one seen has been redesigned from the office 2010 splash screen has been redesigned from the office 2010 splash screen has been redesigned from the offi
[94]PowerPoint and Publisher include alignment guides so users can align objects to a grid.[94][95]Smart tags introduced in Office XP have been renamed as Actions and are now accessible from the context menu.[96]Office 2010 includes updated support for ISO/IEC 29500, the International Standard version of Office Open XML (OOXML) file format.
[6] Office 2010 provides read support for ECMA-376, read/write support for ISO/IEC 29500 Strict.[97] In its pre-release form, however, Office 2010 only supported the Transitional variant, and not the Strict.[98]Office 2010 also continued support for OpenDocument Format (ODF) 1.1, which is a joint
OASIS/ISO/IEC standard (ISO/IEC 26300:2006/Amd 1:2012 Open Document Format for Office Applications (OpenDocument) v1.1).[6]Office 2010 introduces co-authoring functionality in the Excel Web App, and in the client versions of OneNote, PowerPoint, and Word for documents stored on SharePoint 2010 sites and for
shared documents in OneDrive[11] and Microsoft 365.[99] A co-authoring session is automatically initiated when two or more users open the same documents directly to remote locations to facilitate remote access and co-authoring sessions. In the Excel
Web App, the OneNote, and the OneNote web App edits to a shared document in a co-authoring session occur on a sequential basis, in near real-time, as shared document in a co-authoring session occur on a sequential basis, in near real-time, as shared document in a co-authoring session occur on a sequential basis, in near real-time, as shared document in a co-authoring session occur on a sequential basis, in near real-time, as shared document.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared document.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur on a sequential basis, in near real-time, as shared documents.[11]During a co-authoring session occur occur occur occur occur occur oc
session the Excel Web App, PowerPoint, and Word denote how many co-authors are editing a document through a status bar icon that, when clicked in PowerPoint and Word, displays contact information including the presence of co-authors; the Info tab of Backstage also displays these details. When users open the name of a co-author, they can send
email with an email client or start instant messaging conversations with each other if a supported app such as Skype for Business is installed on each machine. If a conflict between multiple changes occurs in PowerPoint or Word, sharers can approve or reject changes before uploading them to the server.[11]In both OneNote and the OneNote Web
App, users can view the names of co-authors alongside their respective edits to the content in a shared notebook, or create separate versions of pages for individual use. Edits made since a notebook was last opened are automatically highlighted, with initials of the co-author who made the edit displayed. In OneNote, co-authors can also search for all
edits made by a specific co-author. OneNote 2010 notebooks can be shared with Office Mobile 2010 users on Windows Phone 7.[11] OneNote 2010 users if shared notebooks use the older OneNote 2007 file format; however, co-author search, and page versioning, and
compatibility with the OneNote Web App will not be available.[100]Office 2010 introduces a new Click-to-Run installation process based on Microsoft App-V Version 4 streaming and virtualization technology as an alternative to the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process based on Microsoft App-V Version 4 streaming and virtualization process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions, and the traditional Windows Installation process for the Home and Business editions are the traditional Windows Installation process.
as a mandatory installation process for the Starter edition. Click-to-Run products install in a virtualized environment (a Q: partition) that downloads product features in the background after the programs have been installed so that users can immediately begin using the programs. The download process is optimized for broadband connections.
[101]During the Office 2010 retail lifecycle Microsoft, in collaboration with original equipment manufacturers (OEMs) and retail partners, introduced a Product Key Card licensing program that allowed users to purchase a single license to activate Home and Student, Home and Business, and Professional editions preinstalled on personal computers at
a reduced cost when compared with traditional retail media.[102] Product Key Card versions of Office 2010 require product activation. Office 2007's product activation was only required for OEM or retail versions of the product.[24]Office File Validation, previously included only in
Publisher 2007 for PUB files has been incorporated into Excel, PowerPoint, and Word in Office 2010 to validate the integrity of proprietary binary file format is scanned to ensure that it conforms with
specifications defined by XML schema; if a file fails the validation process it will, by default, be opened in Protected View, a new read-only, isolated sandbox environment to protect users from potentially malicious content. [104] this design allows users to visually assess potentially unsafe documents that fail validation. [105] Microsoft stated that it is
possible for documents to fail validation as a false positive. To improve Office File Validation, Office 2010 collects various information about files that have failed validation as a false positive. To improve Office File Validation, Office 2010 collects various information about files that have failed validation and also creates copies of these files for optional submission to Microsoft through Windows Error Reporting.[104] Users are prompted approximately every two weeks from the
date of a failed validation attempt to submit copies of files or of other information for analysis; prompts include a list of files that will be submitstators can disable data submission. [106]On December 14, 2010, Microsoft announced it would backport Office File Validation to
Office 2003 and Office 2007.[107][108] On April 12, 2011, it was backported as an add-in for Office 2007 SP2, and on June 28, 2011, was made available through Microsoft Update.[109] Office File Validation in Office 2007 SP2, and on June 28, 2011, was made available through Microsoft Update.
View feature. When users attempt to open a document that fails validation, they must first agree to a warning prompt before it can be opened.[109] Additionally, the configuration options in these two releases are only made available through the Windows Registry,[110] whereas Office 2010 also provides Group Policy options.[104] Protected View, an
isolated sandbox environment for Excel, PowerPoint, and Word, replaces the Isolated Conversion Environment update available for previous versions of Microsoft Office. When a document does not comply with File Block policy or if it fails
Office File Validation, it is opened in Protected View, which prohibits potentially unsafe documents in Protected View, users are allowed to view, copy, and paste the contents of the
document, but there are no options to edit, save, or print contents, and all active document content including ActiveX controls, database connections, hyperlinks, and macros is disabled.[112] Users can open documents outside of Protected View by clicking on the "Enable Editing" button that appears on a message bar within the Office user interface.
As a precautionary measure, active content within a potentially unsafe document remains disabled when a user reopens it after exiting Protected View until a user clicks the "Enable Content" button on the message bar, which designates the document as a trusted document so that users are not prompted when it is opened in the future.[113]Protected
View is implemented as a separate child process instance of Excel, PowerPoint, and Word. The main process of each app is assigned the current user's access token and hosts the Office user interface elements such as the ribbon, whereas the Protected View process consists of the document viewing area, parses and renders the document content, and
operates with reduced privileges; the main process serves as a mediator for requests initiated by the separate process. [111] Protected View is also available when Office 2010 is installed, but it is not as robust due to
the absence of these security features.[114]Office 2010 allows users to designate individual documents as trusted, which allows all active content to operate each time a specific document is opened; trusted documents as trusted, but users are warned if an
attempt is made to trust a document from a remote resource. To increase security, documents in Temporary Internet Files and the TEMP directory cannot be trusted document preferences, referred to as trust records, are stored within the Windows Registry on a per-user basis; trust records contain the full path to trusted documents and
other specific file information to protect users from social engineering attacks.[113]Office 2010 is the first version of Office to natively support Data Execution Prevention (DEP).[12] It complies with DEP policies and provides options to configure
ActiveX controls within Office 2010 without affecting the operation of these controls within Internet Explorer.[12]Additional Group Policy settings for File Block functionality in Excel, InfoPath, OneNote, PowerPoint, and Word.[12]Cryptography improvements including support for Cryptography API: Next Generation in Access, Excel, InfoPath, OneNote, PowerPoint, and Word.[12]Cryptography improvements including support for Cryptography improvements in Cryptography improvements in Cryptography improvements in Cryptography improvements in Cryptography improv
Word; Suite B support; and integrity validation of encrypted files.[12]Document time stamping of digital signatures.[12]Document time stamping of digital signatures. [12]Document time stamping of digital signatures.
images.[116]A new background removal feature based on Microsoft Research technology is included in Excel, Outlook, PowerPoint, and Word to remove the background removal feature based on the ribbon when an image is selected, which
displays a separate Background Removal contextual tab and places a selection rectangle and magenta color over portions of the selected image; the selected image will be retained once the background removal process is complete, whereas the magenta color indicates the areas that will
be removed. Users can manually adjust the position and size of the selection rectangle and also mark specific areas of an image to keep or remove; [117] it is also possible to delete a mark after an inadvertent selection or if it produces an undesired result.
image or wrap text in a document around it; users can also crop the image since removing the background does not reduce its original size. [118] Office 2010 introduces photo crop process improvements in Excel, Outlook, PowerPoint, Publisher, and Word. The crop selection rectangle now grays out the portion of a photo to be removed when cropping
and displays the result area in colorinstead of omitting the removed portion from view, as previous versions of Office did. Photos can now be repositioned underneath the selection rectangle. A new Aspect Ratio option under the Crop command of the ribbon presents a drop-drop down menu with options for both landscape and portrait page
Shape command in previous versions of Office has been replaced with a new Crop to Shape command that allows users to resize and move the selected shape itself when cropping. Office 2010, like previous versions, automatically resizes photos that are inserted into shapes by default, which can negatively affect their aspect ratio. To address this,
photos in shapes can now be cropped or resized after being inserted, and individual Fit and Fill options have been incorporated. The former option resizes the photo so that it is displayed within the selection rectangle or within a
shape in its entirety; both options maintain the original aspect ratio of the selected photo. Photos inserted into SmartArt diagrams can also be cropped, resized, or repositioned. [119] Excel, PowerPoint, and Word support text effects such as bevels, gradient fills, glows, reflections, and shadows. Publisher and Word support OpenType features such as
kerning, ligatures, stylistic sets, and text figures with fonts such as Calibri, Cambria, Corbel, and Gabriola.[116]Excel, PowerPoint, and Word support hardware accelerated graphics when installed on a machine with a DirectX 9.0c-compliant GPU that has at least 64MB of video memory. Excel supports hardware accelerated chart drawing, and
PowerPoint supports hardware accelerated animations, transitions, and video playback and effects; slideshow elements are now rendered as sprites, which are then composited with additional effects such as fades and WordArt
object and text rendering.[121] Additionally, the background removal feature and image adjustments such as brightness and contrast are all accelerated when used on capable hardware.[122]Excel, Outlook, PowerPoint, and Word allow users to immediately insert a screenshot of open app windows or a selection of content on the screen into
documents without saving the image as a file. The functionality is exposed through a new Screenshot command on the Insert tab of the ribbon that, when clicked, presents open windows as thumbnails in a gallery on the ribbon that insert a
screenshot of the selected window into the active app, while the latter option minimizes the currently active app, dims the screen, and presents a selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button, dragging the selection rectangle for users to create a screenshot by holding the main mouse button and the screenshot by holding the main mouse button and the screenshot by holding the screenshot by holding the s
the selection as an image into the document. Only windows that have not been minimized to the taskbar can be captured. After a screenshot has been inserted, various adjustments can be made.[123]SmartArt, a set of diagrams introduced in Office 2007 for Excel, Outlook, PowerPoint, and Word has been updated with new effects, options, and
interface improvements. The SmartArt text pane now allows users to insert, modify, and reorder images and their associated text within a diagram, and new Move Up and Move Down commands on the ribbon facilitate the reordering of content. Images are automatically cropped when inserted into shapes within SmartArt diagrams to preserve their
aspect ratio; users can also manually reposition images. During the crop process, the layout of shapes in SmartArt diagrams is locked to prevent users from inadvertently modifying its position while making adjustments to an image. [119] Approximately 50 new diagrams have been introduced. Of these, a new Picture category dedicated to the
presentation of images includes over 30 diagrams, and the Organization Chart category includes 3 new diagrams. [124] A new Convert to Shapes feature, introduced in Office 2007 SP2 as a context menu option that turned
 SmartArt into a group of customizable shapes is now on the ribbon in both programs. Additionally, in PowerPoint, it is possible to convert to Text option. [124] Office 2010 introduces Accessibility Checker in Excel, PowerPoint, and Word that examines documents for issues affecting visually
impaired readers. It is accessible through the "Check for Issues" button on the Prepare for Sharing group on the Info tab of Backstage, which opens a task pane with a list of accessibility issues in the Prepare for Sharing group so
that they can be resolved before the document is shared with other users.[125] Administrators can configure how prominently this information is displayed within the interface through Group Policy.[126]A Language Preferences interface through Group Policy.[126]A Language Prefe
view and replaces the language customization interface seen in previous versions of Office. [127] The new interface provides information about currently installed language feature that allows users to customize the language of tooltips.
[128]A Mini Translator allows users to translate selected text in OneNote, Outlook, PowerPoint, and Word. Translations for phrases or words are displayed within a tooltip, from which users can hear an audio pronunciation of the selected text provided by one of the Microsoft text-to-speech voices installed on a machine, copy the translation to the
clipboard so that it can be inserted into another document, or view a definition provided by an online service if the selected text is a word.[129] Audio pronunciations are made available through a Speak command, which can be accessed separately from the Mini Translator (e.g., added to the ribbon), but the command can only be used if a text-to-
speech engine matching the language of the selected text is installed. Users can download various text-to-speech engines from Microsoft.[130][131]New features in Word 2010A new navigation pane to rearrange pages in a document
The navigation pane also replaces the Find dialog box in previous versions and now highlights search results.[132]Windows Live Writer integration[8]New features in Excel 2010Excel 2010 includes a redesigned calculation engine to improve performance in response to feedback from users related to previous versions of Excel.[121] As part of the new
calculation engine, a new version of the Solver add-in and new versions of statistical functions were introduced.[133]Data points in a data series are limited only by available memory; in Excel 2007, there was a limitation of 32,000 data points.[133]Graphing features including Sparklines, miniature graphics that represent trends among data; and
Slicers, which allow users to quickly filter data results[133]Macro recording support for chart elements[133]Rule-based cell formatting[133]New features in PowerPoint 2010A new Reading View allows users to display and progress through presentations in a window.[94]An Animation Painter allows users to select and copy an animation and apply it
to another slide.[94]Audio editing and playback functionality allows users to fade, bookmark, or trim audio.[94]Presentation of slides in a presentation sections allow users to visually customize the organization of slides in a presentation fallow users to visually customize the organization of slides in a presentation fallow users to visually customize the organization of slides in a presentation.
account; local broadcasts through SharePoint are supported.[94]Users can simulate a laser pointer in PowerPoint 2010 with a mouse cursor by holding down the Ctrl key and pressing the primary mouse button during a presentation.[94]Video editing and playback functionality; local videos are now embedded within slides by default so that they can
be played regardless of whether users have access to their original source. Options include the ability to add various visual effects, to bookmark specific scenes for playback when advancing slides, to fade in or out, and to trim videos. [94] New
features in OneNote 2010A native x64 printer driver for x64 operating systems[134]A new docked mode enables OneNote to be displayed alongside next to another app window while taking notes.[93]A notebook recycle bin, which stores for 60 days any notebooks, pages, sections, and section groups that were previously deleted.[93]A Quick Filing
feature allows users to choose which location in a notebook to quickly send information to from within other programs.[134]Future incremental search results are prioritized based on previous search queries.[93]Linked Notes reference specific sections of a source document or Web page so that clicking a note that was taken while the source was
open will automatically return users to that content; [134] Internet Explorer 6 and later versions, PowerPoint 2010, and Word 2010 support Linked Notes. [93] Multi-touch pan and pinch gestures when installed on a multi-touch capable operating system [134] Outlook tasks can be created directly from OneNote. [134] Page versioning, which allows
multiple versions of a single page to exist in a notebook[93]Sections can be copied or merged.[93]Support for automatic text wrapping.[134]XPS documents protected by information rights management can be inserted as printouts.[134]The
ability to sync notebooks with a Microsoft account is available in OneNote.[93]Wiki-style bracket syntax can be used to link to pages, sections, and section groups from other locations in a notebook.[93]New features in Outlook 2010Calendar
Groups aggregate calendars of multiple contacts to see the calendar of each conference room in a building.[135]Conversation View now groups messages by their corresponding subjects regardless of originating folders
and includes new commands:[135]Clean Up deletes all messages in a conversation but the most recent messages in a conversation and sends all future replies to the Deleted Items folderMeeting Suggestions now appear when creating a meeting request; attendee schedules are analyzed to determine the most appropriate
suggested time for each attendee.[135]Outlook Social Connector can aggregate content from social network accounts belonging to contacts; it also displays activity feeds, attachments, appointments, and communications for contacts; it also displays activity feeds, attachments, appointments, and communications for contacts.
actions simultaneously; users can create their own Quick Steps and optionally assign keyboard shortcuts or customize tooltips for each of them.[136]Quick View displays the calendar in a message when the user receives a meeting request from a contact so that the user can review adjacent or conflicting appointments[135]Search Tools contextual tab
on the Ribbon appears when users perform a search so that it can be filtered based on specific criteria[135]Schedule View arranges meetings in a horizontal view so users can compare contact meeting times[135]Spell check is available in meeting requests, message subjects, and tasks[135]Support for multiple Exchange accounts within a single
Outlook profile[135]The default size limit for Unicode .ost and .pst files in Outlook 2010 is 50GB (instead of 20GB as it was in Outlook 2007).[137]The To-Do Bar introduced in Outlook 2010 is 50GB (instead of 20GB as it was in Outlook 2007).[137]The To-Do Bar introduced in Outlook 2010 is 50GB (instead of 20GB as it was in Outlook 2007).[137]The To-Do Bar introduced in Outlook 2007 includes additional customization options and visual indicators for conflicts and unanswered meeting requests.[135]Unified Messaging improvements including
information rights management for voice mail, and voice mail transcripts[135]Users can now adjust the zoom level of calendars and message without a subject[135]Users are now notified before sending a message without a subject[135]Users are now notified before sending a message without a subject[135]Users are now adjust the zoom level of calendars and messages in Outlook[135]Users are now able to change the IMAP Deleted Items folder location[135]Users are now adjust the zoom level of calendars and messages in Outlook[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject[135]Users are now adjust the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject the zoom level of calendars and message without a subject to the zoom level of calendars and message without a subject to the zoom level of calendars and message without a subject to the zoom level of calendars and message without
Navigation pane presents thumbnails of each page in a document; clicking a thumbnail opens that page, while dragging it rearranges pages.[95]Live Preview effects for formatting, objects, and text[95]Options to share building blocks and templates to the online Publisher user communities.[95]The scratch area can now be hidden.[95]New features in
Access 2010A Navigation Form interface allows database elements to be customized via drag-and-drop.[138]An Image Gallery stores previously used images so that users can quickly reuse them in a database.[138]Application Parts, which are predefined database templates are available.[138]Data bars now offer gradient fill options.[138]Databases
can be shared on the Web via Access Services in Microsoft SharePoint Server 2010.[139]Quick Start fields provide predefined groups[138]Web services can be used as external data sources in Access 2010.[139]Removed from the entire suiteDocument workspaces[128]InterConnect support[128]Microsoft Office Document Imaging[140]Microsoft

featuresOffice 2010 received mostly positive reviews upon its release, with particular praise devoted to the modified ribbon and the new Backstage view. Laptop Mag rated the suite 4 out of 5 stars, referring to it as the best Office suite yet because of the new customization options provided by the ribbon, the new multimedia editing capabilities, a new
option to share presentations online via PowerPoint, and app response times; Microsoft's decision to include OneNote in all retail versions of Office 2010 also received high praise. [32] PC Magazine also rated the suite 4 out of 5 stars for similar reasons; the inclusion of the ribbon in all programs was viewed favorably because it enhances consistency
and usability, and the Backstage view was praised for simplifying access to file management and printing options. However, PC Magazine expressed dissatisfaction with the "intrusive" default auto formatting options in Word; the lack of an upgrade edition or pricing for users of a previous version of Office; and the stability of Office programs
Nevertheless, Office 2010 was regarded as a "dazzlingly attractive upgrade that received positive reviews from Alphr,[163] PC Advisor,[164] PC World,[165] and TechRadar.[166]Not all assessments and reviews were positive. InfoWorld considered the
modified Ribbon in Office 2010 to be a "disorganized mess", and the user-interface conventions to be confusing because of the lack of consistency across routine functions. The Backstage view was also criticized for "containing a schizophrenic array of buttons, button menus, and hyperlink-like text labels" and for being presented as a full-screen
interface instead of as a drop-down menu similar to Paint and WordPad. Sluggish performance was also a subject of criticism, although the review was written before development of the product had been formally completed. [167] Reactions to the various product versions, including the 64-bit version of Office 2010, were mixed. Ars Technica believed
that Microsoft's transition to a 64-bit version of Office would facilitate the industry's adoption of 64-bit software. [23] However, concerns about backward compatibility and performance issues were raised. [168] [169] After the product's launch, Microsoft stated that "the 64-bit version of Office 2010 is likely to introduce compatibility issues" and
recommended the 32-bit version for most users;[170] the Office 2010 setup program installs the 32-bit version by default unless a 64-bit version for most users;[170] the Office 2010a move that was criticized for effectively
increasing the cost of the product for users already running a previous version. [168][171][172] While the new Product Key Card program was considered to be an affordable alternative to an upgrade version because of its affordable its affordable alternative to an upgrade version because of its affordable alternative to an upgrade version because of its affordable alternative to an upgrade version because of its affordable alternative to an upgrade version in the control of the product Key Card program was considered to be an affordable alternative to an upgrade version in the control of the product Key Card program was considered to be an affordable alternative to an upgrade version because of its affordable alternative to an upgrade version in the control of the product Key Card program was considered to be an affordable alternative to an upgrade version in the control of the product Key Card program was considered to be an affordable alternative to an upgrade version in the control of the product Key Card program was considered to be an affordable alternative to an upgrade version in the control of the product Key Card program was considered to be an affordable alternative to an upgrade version in the control of the product Key Card program was considered to be an affordable alternative to an upgrade version in the control of the co
that its license prohibited the software from being transferred to another machine. [173][174] a feature omitted from other editions of Office 2010 starter installation files to a
USB flash drive and use its programs on another PC, even one where a version of Office was not installed.[175][177] However, criticism was directed at the edition's lack of functionality and its mandatory advertisements.[178][179][180]The initial two-week sales of Office 2010 were lower than those previously observed with the suite's predecessor
Office 2007, a fact considered by Stephen Baker of NPD Group to be disappointing.[34][181][182] Baker attributed this lack of sales to "a seasonally slow period for PC purchases" and an "increasingly saturated installed base." Free alternatives to the productivity suite such as Google Docs were not regarded as detrimental to the adoption of Office
2010;[34][181] however, this view was not shared by all journalists.[183][184] In spite of initial sales that were lower than expected, sales of Office 2010particularly consumer salescontributed to a record first-quarter profit for Microsoft during its 2011 fiscal year.[36][185][186][187][188] While other products contributed to this record, Microsoft
Business Division, the division responsible for Office, earned the highest percentage of total revenue during this time period. [187][189] As of November 1, 2010, over six million copies of Office 2010 were sold, a figure that represented "more than 30 copies being sold every minute." [190] Details related to Microsoft's second-quarter earnings during
the company's 2011 fiscal year were posted on January 27, 2011, showing that the company had set a record for second-quarter revenue of $19.95 billion. The Microsoft Business Division grew by 24% year-over-year, with Office 2010 becoming the fastest-selling consumer version of Office in history; license sales of Office 2010 becoming the fastest-selling consumer version of Office in history; license sales of Office 2010 becoming the fastest-selling consumer version of Office 2010 becoming the fastest-selling consumer
 ahead of Office 2007 over an equivalent period following launch."[191][192][193] Results during the company's third-quarter 2011 fiscal year were later strong, with Microsoft's Business division expecting to see "Office sales exceed PC demand in fiscal 2011.[194]On June 15, 2011, a year after Office 2010's general availability, Microsoft Office
corporate vice president Takeshi Numoto stated that deployment of the productivity suite among business customers was five times faster than that of its predecessor, Office ever with a copy being sold every second since the product launched; [35] the claim was
previously made by Microsoft in January during the Consumer Electronics Show.[195][196] Based on this claim, Network World estimated that an approximate 31.5 million licenses were sold since Office 2010's launch.[35] Office Online proved to be popular as well, with Numoto stating that it had seen over 50 million unique visitors since its launch
[35] By July 2011, over 100 million licenses were sold,[197] which contributed to record Q4 earnings and annual revenue from Microsoft's Business Division had increased by 27 percent during the same period.[199] During the second quarter of
Microsoft's 2012 fiscal year, the company reported a revenue of $20.9 billionanother record for the companywith Office 2010 being a contributing factor, having sold nearly 200 million licenses as of December 31, 2011,[37] in spite of declining Windows sales. [200] Microsoft reportedly discontinued sales of Office 2010 on January 31, 2013, just two
days after its successor, Office 2013, reached general availability.[38]According to a survey conducted by market research company Forrester Research in 2011 with a sample consisting of 150 North American and European enterprise executives, Office 2010 was in use by 52% of respondents, behind Office 2003 or earlier and Office 2007 at 74% and
72%, respectively.[201] In a 2013 survey, Office 2010 was the dominant productivity suite when compared to previous versions and competitors' offerings with a total of 85% usage share among the 155 enterprise survey respondents.[202] According to a 2017 survey, Office 2010 was the most used edition of Microsoft Office among organizations with a total of 85% usage share among the 155 enterprise survey respondents.
a usage share of 83% surpassing Office 2007 at 68% and Office 2003 at 46%, respectively. About 53% of respondents were also using Microsoft Office suites a b Kolakowski, Nicholas (April 19, 2010). "Microsoft Office 2010 Released to Manufacturing". eWeek.
