As the name suggests, it is a simulator that allows players to build structures. Here you can build a house from scratch, brick by brick. The game is played from the first-person perspective. It also offers different difficulty levels so you can play with instructions or completely on your own. Unlike other construction simulators, Builder Simulator has a realistic foundation. Every part of the game is well designed. However, the game is still in pre-alpha stage. So expect some glitches that need fixing. What is Builder Simulator? Builder Simulator is a game for those who want to build a structure. Here you can create your own designs, be it a house, a shop or an industrial building. As with real construction, you have tools and special equipment at your disposal. Of course, you can also use real building materials. Be careful with these materials and make sure you don't run out to continue building. That said, the game offers various levels of difficulty. In the easy phase, you can create a structure with full instructions that will guide you step by step. However, you won't get any help in hard mode. Instead, you rely solely on your construction skills. Even in easy mode no staff will help you. You must do everything. At the time of writing, Builder Simulator is in the pre-alpha demo stage. Therefore, expect problems that require developer attention. One of them is a compilation errorfund. Some players could not pour the entire foundation with concrete. In addition, mixing the concrete has proven difficult as it is almost impossible to get an accurate mix. Ultimately, the motion blur rendered the game unplayable. Is it worth downloading? Overall, Builder Simulator is a good game if you like building games. Here you can build a house from scratch. The app contains everything a real construction project can offer to give you a realistic experience. However, since this is a demo game, various issues affect gameplay. However, it can still make you dependent on the full game.
