Here is a nice installation video by TrolledUnicorn: And here is a Spanish install video by Nehrox: How to install it: 1) Backup Everything! Type %appdata% at the top of any explorer window to find the .minecraft folder.Backup the entire folder by renaming it 'minecraft_save' (note the lack of '.' at front). 2) AMCO requires a fresh copy of the game! There are over 150 mods in AMCO, so it is likely to conflict with anything but a fresh install. Log on to minecraft.net and get a fresh copy here: [url=""]minecraft.net/login/[url] 3) After getting a vanilla copy of minecraft 1.5.2 Download AMCO 1_5_2 Rev 4 for clients here: [url=""]ACMOfor 1.5.2 Rev4a Client/[url] Download AMCO 1_5_2 Rev 4 for servers here: [url=""]ACMOfor 1.5.2 Rev4a Server/[url] A very nice Rev4 example world is also available here: [url=""]Cliffs of Insanity Demo World/[url] It has some awesome builds and shows a few things that are possible. 4) Extract the contents of the "toRoot" folder to your new .minecraft folder. 5) Extract the contents of the "toJar" folder to your fresh minecraft.jar or minecraft_server.jar file. For Linux servers: prevent gui/xwindows crashes by using -Djava.awt.headless=true 6) Done. Start the game and enjoy a whole new aspect of Minecraft! All the new content takes a while to load, so it can be a few minutes for the game to start. The game is true for generating a new world. Patience is required. 7) Optional: Don't like one of the mods? Disable it. Go to the .minecraft/mods folder and delete it or move it to some other folder. How to Uninstall it: in case something goes horribly wrong Simply replace the contents of your .minecraft folder with the contents of the minecraft_save folder created in Step 1.
