LiftMaster 41C4220A Gear and Sprocket Assembly Kit Replaces 41A2827, Fits Various Garage Door Openers **Garage Door Opener Troubleshooting and Replacement Parts** Valid until July 9, 2025. This article covers common issues with garage door openers and provides guidance on troubleshooting and replacing faulty components. **Safety Sensors**: If your safety sensors aren't working, the garage door opener won't shut. Check alignment and remove any obstructions. Replace the safety sensors if they're faulty. **Remote Devices**: Vehicle remotes can wear out due to frequent use. Try replacing the battery first; if that doesn't work, replace the entire remote device. The remote keypad may also need replacement if exposed to weather. **Chain or Belt**: Chains and belts can become worn or broken. Replace them if necessary to ensure proper garage door operation. **Logic Board (41A43157D)**: This board controls the motor and lights. If your opener won't close, check for power issues, obstructions, and misaligned safety sensors. **Troubleshooting Steps**: To resolve common issues, follow these steps: 1. Check the electrical outlet for power. 2. Remove any obstructions blocking the safety beam. 3. Align safety sensors and reconnect loose wires. 4. Replace weak or dead remote control device batteries. **Finding Replacement Parts**: To locate repair parts on a Craftsman garage door opener diagram: 1. Find your model number under the light cover on the motor unit. 2. Key in the model number on Sears PartsDirect's search bar to view available parts. Note: This article applies to new accounts opened between April 1, 2025, and July 9, 2025. Looking for replacement parts for your Craftsman garage door opener?
