Download100%Clean & SafeHow to unlock Dell laptop without the password? This post provides 6 helpful methods to help you bypass password or unlock a Dell Latitude laptop without the password, you can try these ways. "When I turn on my Dell
laptop, I have to put in my password in order to get to the main screen. I don't have another user, it's just me, and I forgot my Dell laptop password Windows 10 and I don't know how to get in to change it or how I can recover it. Any and all help would be greatly appreciated." Setting a password for Dell laptop is arguably one of the most essential
things to protect online privacy and safety. However, while passwords secure our data on the laptop password. Once it happens to you, it means you will lose all access to your computer, and you are unable to open your programs, folders, or any other
files on the Dell laptop. So, you must be wondering how to unlock a Dell laptop without the password. No worries, we're going to discuss the solutions in the content below. How to unlock a dell laptop without the password. Some of them are quite simple, while others are rather
complicated. You can look through them first and choose the most suitable one for you. Note: All the methods are available on any Dell laptop by pressing Ctrl+Alt+Del in safe mode When we install Windows 7/8/10/11, an administrator account
is created automatically, which is invisible to us. If you don't enable this account and set a password for it, you can use this hidden administrator account to log in to your Dell laptop when you forgot the password. Now, let's see how to unlock a Dell laptop Windows 10 with the hidden administrator account: Step 1. Restart your Dell laptop and press
the F8 key when Windows starts. Then, you will a new login screen. Step 2. Press the Ctrl + Alt + Delete keys simultaneously. Step 3. Choose "Switch User", enter "Administrator" as username, and leave the password box blank. Hit "Enter" and you can log in to your laptop successfully. Way 2. Unlocking with the BIOS Password If the previous owner
set a BIOS password, you'll need it to access the laptop. Here's how to unlock with the BIOS password when prompted. Step 3. Once unlocked, go to Security > Password and reset both
the BIOS and system passwords to gain full access. If you don't know the BIOS password, Dell has a master password reset process. You'll need proof of ownership and to contact Dell laptop via Command Prompt How do you unlock a Dell laptop
screen? If you are stuck on the login screen, you can reset the forgotten password to regain access to your Dell laptop. Command Prompt is a Windows built-in tool that can execute many operations, including deleting partitions, checking disk errors, and resetting password. Since you are unable to log in to your system, how can you open Command
Prompt? Below is how to unlock Dell laptop without disk from the Windows recovery environment: Step 1. On the login screen, press "Shift" and click the "Restart" option simultaneously, then click "Troubleshoot". Step 2. In the "Advanced options" window, click "Command Prompt" to open it. Step 3. In the CMD, type "move
E:\windows\system32\utilman.exe E:\" and press "Enter" to move the utilman.exe file. Step 4. Then, input "copy E:\windows\system32\utilman.exe file to the target path. Step 5. Then type "wpeutil reboot" and press "Enter". Step 6. Click the human icon on the right bottom, then
type the net user username password (eg. net user "Leah George" 2022) and press "Enter". Step 7. After that, you can use the new password reset disk Aside from CMD, Windows offers a password reset disk to recover the lost password. But it is only suitable for those who have
made a password reset USB before forgetting the laptop by resetting the password. If you have such a disk around you, you can easily unlock your Dell laptop by resetting the password. Step 1. On the sign-in interface, click "Reset password reset disk,
then choose the password reset disk from the list and click "Next". Step 4. In the new interface, after changing the password hint, click "Finish" to exit the window. That's how to unlock a Dell laptop with a password reset USB. Way 5. Unlock Dell laptop with a
bootable USB What if none of the above methods work for you? Then, the fourth method should be your last string. That is to reset the laptop password via a third-party tool like AOMEI Partition Assistant. It can help you create a Windows password reset USB, even after you have forgotten the password. So it is applicable in many cases. And it has
been proven to be 100% safe and feasible on all editions of Windows 11/10/8/7. Besides, the process won't require you to format the partition or reinstall the operating system, so you don't have to worry about data loss. Here we provide a demo version for you to have a free trial, then you can follow the guide on how to unlock a Dell laptop without the
password. Stage 1. Create a bootable USB Step 1. Connect a USB with any Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools"> "Reset Windows PC that can work normally, then download and open this unlock tool, and select "Tools" open this unlock tool, an
device and click "Proceed". Step 4. Read the notes about creating a bootable USB, then click "Yes". Step 5. Wait for some minutes, then click "Finish" when the bootable USB is created. Stage 2. Reset the password to unlock a Dell laptop Step 1. Connect the bootable USB to the locked laptop, change the boot drive to boot the PC from the USB, choose
the Windows OS, and click "Next". Step 2. All accounts on the PC will be shown, click the target account and tick "Reset Account Password", then click "Next". Step 3. In the new popped window, reset the password and click "Yes" after confirming it. Conclusion How to unlock a Dell laptop Windows 7/8/10/11? Four reliable and feasible methods have
been explained step by step in this article. By trying the solutions mentioned above, you can easily figure out how to unlock a Dell laptop without the password. Among all the suggested methods, it's recommended to use AOMEI Partition Assistant Professional as it ensures no data loss and reset the password in simple and easy steps. If you are facing
other computer issues, you can also ask this tool for help such as cloned SSD won't boot, SSD not showing up, no EFI partition was found, and so on. management experience. Free Download Windows 11/10/8/7100% Secure 5 Quick Ways to Unlock a Dell Laptop Without Password Unlocking your laptop without a password can be a lifesaver in times of crisis. We've compiled five effective methods to help you regain access to your device swiftly and securely, regardless of your Windows version
These approaches demonstrate adaptability and can be used with various Dell laptops. This ensures you'll find a solution that suits your specific needs. Way 1. Press Ctrl+Alt+Del keys If you've ever encountered a locked Dell laptop, your first instinct should be to try the time-tested method of pressing "Ctrl + Alt + Del." This simple yet effective
keyboard shortcut can sometimes be the key to regaining access to your laptop. It brings up a menu with various options, including "Lock," "Switch User," "Sign Out," and "Task Manager." By switching users to admin, you can log in without a password. Here are the detailed steps to log into a Dell laptop without a password: Step 1: Restart your Dell
laptop and press the "F8" key once it reboots. This will take you to the admin login screen on your laptop. Step 2: Here, hold the Ctrl + Alt + Delete keys simultaneously. Select "Switch User" from the available option and use "Administrator" as your username. Leave the password field blank and hit "Enter." With it, you can sign into your laptop
without a password. Further Reading: How to Reset Password Windows 11 Way 2. Use CMD Unlocking your Dell laptop using the Command Prompt (CMD) can be a handy alternative if you've forgotten your password. This method involves resetting the password through Command Prompt, granting you access to your laptop once again. Since this
method requires you to run commands, only try it if you are proficient with CMD. Following are the steps you need to log into a Dell laptop through Command Prompt: Step 1: Reboot your Dell laptop, and on the login screen, hold the "Shift" key and click "Restart." On the appearing "Choose an Option" screen, tap "Troubleshoot." Step 2: It will take
you to "Advance Options," where you need to click "Command Prompt" to launch it. Here, run the following command: move E:\windows\system32\utilman.exe E:\ Step 3: Now run the "copy E:\windows\system32\utilman.exe E:\ Step 4: The next thing you
need to do is tap the human icon near the bottom right corner and run the command "net user username password." Replace "username" and "password Reset Disk Having previously generated a password reset disk for your Dell
laptop can prove invaluable in case you ever forget your password. This disk provides a straightforward means of regaining entry to your laptop without the need to recall the initial password. Once you've located the password reset disk you prepared, follow these steps to gain access to your Dell laptop without requiring the password: Step 1:
Connect your password reset disk to your Dell laptop and restart it. Once you reach the login screen, enter any wrong password. Once the "Reset Password reset disk and press "Next" to proceed. Step 3: Now, you
will come across the new password creation field. Here, create the password, confirm it, add a hint, and finally click "Next." Lastly, "Finish" the process and use new credentials to log in. Way 4. Use Microsoft Account to
unlock a Dell laptop without a password. It's crucial to verify your ability to remember the password linked to your account. The following steps outline this process: Step 1: In case you don't remember the website, use a web browser on any device to access the "Recovery Your Account" website and type in your Microsoft email ID. It will ask you to
verify your identity by entering the last four digits of your linked phone number. Step 2: Now, tap "Get Code" to receive a confirmation code on your phone number. Insert the code you received and press "Next." It will take you to a password reset window where you can create a new password. Afterward, you can use your Microsoft account to log
into your Dell laptop. Further Reading: How to Run Dell Inspiron SSD Upgrade Way 5. need to access certain startup settings. Starting with a clean slate ensures nothing interrupts the process. Press the F8 key repeatedly during startup to enter Safe Mode. Safe Mode allows you to boot into Windows with minimal drivers and no unnecessary software, making it easier to troubleshoot or change account settings. Once in Safe Mode,
select the "Administrator" account on the login screen. Windows 10 often has a hidden administrator account that can be accessed in Safe Mode, especially if no password of the locked account. Once logged in, you have the authority to modify user
accounts, including resetting or changing passwords. Reboot your laptop normally and log in with the new password. After making changes, you'll want to restart to enter back into the standard Windows environment with all functionalities intact. Once you've completed these steps, you should have successfully bypassed the administrator password.
This process will allow you to regain full access to your Dell laptop without losing any important data. Always try to remember or securely store your passwords to avoid needing to bypass them in the future. Consider using password recovery tools only if you're absolutely sure they are safe and legal. Keep your laptop's operating system and drivers
up to date to avoid unexpected issues. Consult a professional if you're uncomfortable performing these steps on your own. Be cautious of online guides that promise quick fixes, as they might not be reliable or safe. Yes, using Safe Mode and the built-in administrator account usually allows password changes without data loss. If it's not visible, it migh
be disabled. You'll need an alternative method, such as a password recovery tool. Bypassing passwords without the owner's permission is illegal and unethical. Only do so if you have legitimate access. Yes, if your account is tied to a Microsoft account, you can reset the password online through the Microsoft website. Consult Dell support or a
professional technician for further assistance. Restart your Dell laptop. Boot into Safe Mode with F8. Log in with the built-in Administrator account. Change the password via Control Panel. Restart normally and log in. Regaining access to a Dell laptop after forgetting the administrator password can seem daunting, but it's manageable with the right
steps. Whether you're diving into Safe Mode or considering a password reset tool, the key is to remain calm and methodical. Remember, these steps are intended for those with legitimate access rights. It's always wise to keep your passwords stored securely and to routinely update them for safety. If you've found this guide helpful, consider
bookmarking it or sharing it with others who might face similar issues. Being locked out can be frustrating, but with the knowledge of how to bypass an administrator password, you'll be back on track in no time. For further reading, explore Dell's support resources or consult community forums for additional insights. Stay informed, and keep your

While he still does some consulting work, his primary focus now is on creating technology support content for SupportYourTech.com. His work can be found on many websites and focuses on topics such as Microsoft Office,
Apple devices, Android devices, Photoshop, and more. Unlock your Dell laptop is straightforward—whether or not you have set up a password. If you have is traightforward—whether or not you have set up a password set up, you can unlock it by selecting your account and entering the password. If you have if you have a password set up, you can unlock it by selecting your account and entering the password. If you have if you have if you have if you have a password set up, you can unlock it by selecting your account will do the trick. However, the process gets complicated if
you have forgotten your password. While there are some methods to unlock your Dell laptop without a password, many of them require specific conditions to be met. For instance, you'll need a password reset disk or access to admin accounts. Nonetheless, even if you do not meet any of the prerequisite conditions, I'll also show you other methods to
unlock your Dell laptop. If you've logged into your Dell laptop using a Microsoft account, it is pretty easy to unlock it in case you forget your password. You can use the Microsoft account's "forgot password of your laptop. Open a browser of your choice on any other
internet-connected device. Open the Microsoft Password Reset page. Type the phone number or email address associated with your Microsoft account, and hit Next. Set up new password, confirm it, and press Next. Use the
newly changed password to unlock your Dell laptop. A password reset disk is like a master key that allows you to reset disk in advance, here's how you car
use it to reset your account password and unlock your laptop. Plug in your password reset disk to the laptop. Enter a wrong password button that pops up. In the new window, click on Next. Select your password reset disk from the
drop-down menu, and click on Next. Type in your new password, confirm it and enter a password hint. Click on Next, and select Finish. You can also unlock your laptop without a password by using an alternate admin account. If you have access to another admin account on the same laptop, you can use that account to remove the password of your
locked account. Log in with your alternate admin account. Open Control Panel. Next to View by, make sure it is set to Category. Go to User Accounts, and click on Change the password. Leave the new password and password hint sections
blank. Click on Change password. Close Control Panel and press Windows + L to go to the lock screen. Click on your previously locked account to open it without a password, you can create one yourself. Every Windows computer has a hidden
administrator account that is locked by default. You can unlock this hidden administrator account by editing the Security Accounts Manager (SAM) files in your Registry from Windows Recovery Environment (WinRE). Then, you can use this admin account to remove the password for your locked account. Caution: The method displayed below is strictly
for educational purposes. We do not promote unautorized access to any device or you have the consent of the owner. In the Windows login screen, select the power button. Hold down the Shift button and click on Restart. Navigate to Troubleshoot > Advanced
options > Command Prompt. Type regedit and press Enter. Select the HKEY LOCAL MACHINE key. Click on File, and select to find your OS drive, look for system folders like Program Files, Users, and Windows. These folders will also
be in the Boot (X) drive, but this drive isn't the OS drive, so ignore it. Navigate to Windows\System32\config. Select the SAM file and press Enter. Type REM_SAM\Domains\Account\Users\000001F4 Double-click the F entry. Change the 11 value to 10 in
the first column of the 0038 row. Click on OK button. Close Registry Editor and Command Prompt. Select Continue to close WinRE. Log in with the recently unlocked hidden admin account. (It won't have any password lock.) Use the above method to remove the password from the locked account. After recovering your locked account, you can then
disable hidden admin account again. This is to prevent random users from getting unauthorized administrator access on your laptop. Press Windows + R to open Run dialog box. Type cmd and press Ctrl + Shift + Enter to open Run dialog box. Type cmd and press Ctrl + Shift + Enter to open Run dialog box.
Exit Command Prompt. Lastly, you can use the brute force method of resetting your laptop to unlock it. This will remove all data from your laptop, including the password, and revert your laptop to factory state. Select the power icon, hold Shift, and click on Restart. On WinRE, go to Troubleshoot > Reset this PC > Remove everything. Click on Local
Reinstall and select Just remove my files. Click on Reset. After the reset completes, set up a new user account on Dell Inspiron laptop, but I cannot recall as I have not used it for a long time. I have sensitive data stored on my laptop, and I need to access it any way. I

accessories. For example, what to do if your Dell monitor keeps entering power save mode. We hope you have many years of useful service from your Dell products. Online privacy and safety are arguably the most essential things we have to protect in the digital age. However, while passwords serve as great protection mechanisms, they can also get
us into some sticky situations. It's especially problematic when we accidentally lock ourselves out of important accounts and devices like our personal computers. Has this happened to you as a Dell Inspiron user? No worries. Here's what you must know about how to unlock a Dell Inspiron laptop without the password. Table Of Contents How To
Unlock A Dell Inspiron Laptop Without The Password Photo by Robots 1. Utilize The Administrator User In Safe Mode Windows can be a tricky thing to navigate because of all the things that run in the background. However, these individual processes are necessary to run the device and can even act as our protection. An example of this is the hidden
administrator account Windows automatically generates when we install the OS on our computer. Now, why is the administrator relevant to this discussion on how to unlock a Dell Inspiron laptop without the password? Simple. Imagine you forget the password to one of your Windows accounts/profiles on your Dell computer. How can you possibly
recover the account, its contents, and settings without forcibly deleting it? The answer: through the administrator account. Using this method is the easiest way to learn how to unlock a Dell laptop when you forget the password. However, you'll need to access your computer's Safe Mode before you can use the administrator account. Follow the
directions below for further guidance: Restart your laptop Hold the F8 key when the OS starts up to bring up the admin account Press the Ctrl + Alt + Delete keys at once Select "Switch User" on the menu Enter "Administrator" in the username field and keep the password blank Hit the Enter key Navigate to "Account Settings" Choose the account
with the forgotten password and reset it 2. Use The Windows Password Reset Disk If you've got a password reset disk handy, then you don't need to worry too much about forgetting your password. That's because you can easily learn how to unlock a Dell Inspiron laptop without the password on Windows 7, 8, or 10 using a disk. Simply refer to the
directions listed to begin: Restart the laptop Enter wrong password field Press "Next" on the password field Press "Next"
Type in your new password on the first two spaces Enter a new password hint (not required) Hit "Next" Afterward, you can try logging into your laptop with the new password you created. If you've logged in successfully, congratulations. You've successfully learned how to unlock a Dell laptop screen without a password. 3. Use A Windows Password
Reset Tool Learning how to unlock a Dell Inspiron laptop without the password isn't easy if you don't have a password reset disk. In this case, you'll need to learn how to reset the password on a Dell laptop without the disk. For that, we recommend using a separate tool like PassFab 4WinKey. With tools like these, you can easily learn how to unlock a
Dell computer without the password. Whether it's your regular account or the administrator account's password you forgot, it's certainly going to help. It even lets you remove accounts or generate them without having to remember your password. Interested in the tool? Here's how it works. Install PassFab on a separate computer Open the
application and plug an empty flash drive/CD/DVD into said computer Select the flash drive you inserted from the dropdown within PassFab into your Dell Inspiron laptop Restart the laptop Choose the operating system that pops up on the wizard and hit "Next" Pick the
target user account Select "Reset Account Password" on the selection at the lower-right Click "Next" Key in a new password and hit "Reset" Choose "Reboot" and restart your Dell Inspiron laptop After the restart, you should have a reset password on the account you chose. You need not reinstall Windows or conduct a factory reset just to recover the
device. However, do note that this PassFab may cost money to use. If you want to use a method that doesn't cost money, we recommend checking out the other options we've listed. 4. Use Your Microsoft Account Learning how to unlock a Dell Inspiron laptop without the password can be costly. Third-party apps can cost money while those that are
free might be a little sketchy. How can you possibly learn how to reset a password on a Dell laptop without the disk if other methods are unreasonable? We recommend using your Microsoft account to bypass the problem. This is one of the easiest methods you can use because the steps are similar to regular account recovery. Microsoft will simply
send you a reset code via text or through your recovery email address. Afterward, you must simply generate a new password to use. There's no need to even try to remember your Dell Inspiron laptop in the first place. If you did, then
check out the steps below so you can easily access your computer: Open your Microsoft account recovery tool Verify your identity by entering the required information from your contact number Select "Get Code" Type in the code you receive through text Choose "Next" Type in
your new password in the reset window and hit "Next" Turn on your Dell Inspiron laptop and sign in using your newly created account to use
the laptop. Otherwise, resetting your Microsoft account's password will only reset your access to Outlook. 5. Factory Reset Your Computer Finally, if you want to learn how to unlock a Dell Inspiron laptop without the password but all other methods aren't applicable, then a factory reset may be in order. This is the most drastic method as it erases all
of your laptop's data and information. Hence, it will lose all of the custom files, software, and even settings you've put into it. With that said, we recommend using this as a last resort kind of option if all else fails. Ideally, you should only do this once you have backed up your files to an external storage or the cloud. Nonetheless, if you're willing to
forgo your saved data, here's how to factory reset a Dell laptop without the password. Power on the list that appears In the "Choose an option" screen, choose "Troubleshoot" Press "Reset your PC" on the list that shows
up Click the "Next" button on the screens that follow until the factory reset begins Afterward, your Dell Inspiron laptop should start the factory reset. All you must do now is just wait until the applications you need to run the
computer. Third-Party Apps That Can Help As with method number three, several third-party apps can help you reset your password. Interested in learning more? Here are the best third-party apps that might help you learn how to unlock a Dell Inspiron laptop without
a password. 1. Active Password Changer Professional Active Password Changer Professional is a convenient password reset software that's user-friendly enough even for the non-tech-savvy. Like most other software, its main purpose is to erase and reset the password on your Windows computer. However, it cannot recover your old password. For
that, we recommend checking the other items on this list. Nonetheless, Active Password Changer is a great alternative app to use if you want to regain access to your computer's account. It requires no data erasures except for your password. Moreover, you don't even need to hard reset your Dell laptop for it to work. 2. iSunshare Windows Password
Genius iSunShare is one of the many tools you can use as you learn how to unlock a Dell Inspiron laptop without a password. It's not too complicated to use if you have a bootable USB. Moreover, it acts as a bypass manager that can help you get around your old password completely. To use it, simply follow the steps below. Install iSunshare on a
separate Windows computer After downloading iSunshare, launch the app and connect an empty USB stick Click the USB you inserted and press the "Begin burning" button to generate a USB password disk Insert the USB into your laptop and boot it up Press the Boot Menu Key (F12 on a Dell laptop) once the vendor logo shows up Wait until the Boot
Menu shows up Select the USB drive you inserted within the Boot Menu Choose the account again without a password but will still make it accessible Click "Reboot" to restart the device Try logging into the account again without a password 3. LabWin "I forgot my Dell
laptop password on Windows 10, what do I do?" If that's the question you're asking, we recommend trying out a program like LabWin. With this tool, you can create an external bootable media disk to recover your old password. It's fairly straightforward and shouldn't be too difficult to use. However, note that you can only get back local and domain
account passwords with it. Moreover, it costs money to use so don't expect to be able to recover your account for free. Nonetheless, it's not too pricey and only costs a little less than $30. However, the enterprise edition will ask for a whopping $295 if you want something more robust. The app does have a free version but it can only create a password
reset disk for you. It can't unlock your computer unless you pay for the full app. 4. Ophcrack Live CD Sometimes, resetting the password to a Windows account isn't the way to go. That's because you may want to recover your old password to a Windows account isn't the way to go. That's because you may want to recover your old password to a Windows account isn't the way to go. CD is one of the best software you can use if you want a password recovery tool for Windows. However, the caveat here is that it can only get back simple password contains 14 characters. On the other hand, you will need to fork over
$100 to $1,000 if the password you set is too strong. This will allow the software to get a wider array of rainbow tables to pull from. Regardless of which version you use, Ophcrack should be able to use its brute force algorithm to recover your password. However, it may take time - even up to 45 minutes. Nonetheless, you should be able to recover
```

the password if you remain patient. This should limit any potential damages you might cause to the account by using a password resetting tool. In addition, it's a good way to bypass more drastic measures like conducting a factory reset. 5. PassFolk SaverWin If you need to learn how to unlock a Dell Latitude laptop without the password, we

recommend PassFolk SaverWin. It's a handy tool to use if you need something compatible with Windows 10 devices. Moreover, it's one of the fastest performers available because it can conveniently reset any locked account within just 15 minutes. How does it work? Like most other software, PassFolk allows you to generate a password reset disk through a CD, DVD, or Pen Drive. What's more, the password resetter will remain active and usable as long as the hardware remains undamaged. As a result, you can reset your computer's password as much as you want whenever you happen to forget it. Best of all, PassFolk works not only with Windows 10 devices but also with those using older Windows operating systems. Hence, you can reset the password on something with Windows 7, 8, or 8.1. It even works with older versions of Windows like Vista or XP. Reasons To Unlock A Dell Inspiron Laptop Without Password. The most likely reason being you forgot your Dell laptop password and you can't access your account. It's a fairly understandable reason. After all, people nowadays need to monitor at least five different accounts and passwords in the digital age. Forgetting a few of them is fairly common. Resetting the password or recovering it is the best way to gain access to your account without losing data. Apart from this, you might simply want to unlock an old laptop that you haven't used in a while. Say you want to sell your old Dell Inspiron laptop that's been lying in a corner for some time. If this is the case, it's only natural that you have to access the account to delete all your files and folders. Moreover, doing so could help you backup all the files you had saved before you conduct a factory reset. Finally, you might want to learn how to unlock a Dell Inspiron laptop without the password to recovering the password or resetting the account.
