

I'm human

While Katolight no longer manufactures generators in-house, many businesses and organizations continue to utilize them nationwide. The company's legacy lives on through its industrial and commercial generators, which were produced in various sizes and configurations, including power-take-off (PTO) generators and the Genset line. Katolight generators remain a vital part of critical infrastructure in sectors such as communications, healthcare, government installations, and numerous other industrial applications. Their diesel-powered generators span from 15kW to 2759kW, offering low and medium voltage options, while their gaseous powered generators range from 25kW up to 800kW. Our commercial and industrial clients rely on us for Katolight generator servicing, a testament to our extensive experience in this area. In contrast to other service providers, we maintain an extensive inventory of replacement parts and offer repair capabilities for these machines. If you're seeking a trustworthy provider or parts supplier for your Katolight generator, look no further than FM Generator. As the leading generator services company serving the Northeast & Midatlantic regions, we cater to commercial and residential clients with installation, maintenance, parts, repairs, industrial & commercial projects, and more. The story of Katolight dates back to 1952, when it was founded in the Midwest farm belt, primarily catering to agri-business needs based on location and regional requirements. Over time, the company has continued to provide power solutions for various industries, including government installations and hospitals. Their extensive range of generators is now utilized globally, with notable examples including Telesat-Satellite Communications in Macau and the National Institute of Health in Washington, D.C. In 2007, Katolight was acquired by Tognum Group, which generated significant sales revenues of nearly \$135 million the previous year. The acquisition marked a strategic move for both companies, allowing them to collaborate on future operations and expand their market reach. With its reputation as a well-positioned brand, Katolight's acquisition brought substantial benefits, including increased consumer recognition and access to end-users. Today, the Tognum Group continues to leverage Katolight's expertise in providing dependable power solutions. The company's product line reflects its commitment to customization, catering to diverse needs through various sizes and configurations for industrial, agricultural, and residential applications. By prioritizing customer requirements and incorporating cutting-edge research into their operations, Katolight has established itself as a leader in the industry. Katolight's power solutions consistently meet expectations and deliver results. Their generators come in various configurations, including diesel and gas-powered models. With a range of features from low to medium voltages (15kW to 2795kW), Katolight caters to diverse needs. For commercial applications, they offer specialized controls tailored to specific requirements. In addition to liquid-cooled and air-cooled sets, Katolight also provides generators that run on liquid petroleum and natural gas. However, their home generators require professional installation due to the need for permanent mounting. The cost of Katolight Generators varies based on power ratings. Models with lower power ratings (5kW to 2,000KW) are available at affordable prices, starting from around \$300 for a 15kW generator and increasing to up to \$10,000 for higher-power models or PTOs. Finding a Katolight dealer is relatively easy; simply search online using the keyword "Katolight Generator Dealers." This will yield listings of various online dealers, allowing you to make an informed purchase decision. Katolight's warranty policy offers protection for 2-5 years, depending on the generator type. The PTO generator comes with a 5-year warranty that covers all parts and labor for two years, followed by one year of parts-only coverage. As a reputable brand, Katolight generators are built to last and efficient in fuel consumption. They feature special controls designed for optimal operation and serve residential and agricultural needs. Katolight Corp., owned by the Tognum Group based in Germany, manufactures their generators at facilities in Mankato, Minnesota, USA. If you're looking for Katolight generator parts or repair services, related products are available.
