Dalaran status report wow classic

@GFWheeler_ @Warcraft Fly-ee Mc.Anger Issues @sajjad66775975 @Warcraft pls solve Iranian problems Last update of the page from dwnddetector.com Game ID of the Dalaran Status Report item is 7309. Dalaran Status Report tooltip Dalaran Status Reports an additional objective of these missions level faction categories rewards Tools of the Trade 20 H Rogue Dalaran Status Report can be found within ... Name and location description Ambermill Strongbox Related Points of Interest Dalaran StatusQuest SubjectUnique With Number of Query MySQL: 22 Time of MySQL queries: 0.20741581916809 The requested URL /images was not found on this server. Apache/2.2.22 (Linux) Server at Port 80 Learn more about free trial. Sign up to follow this Follow-up 0 TellMeWhen Classic Sign up to TellMeWhen Discord official! Ask questions, share configuration, or hang up. TellMeWhen is an addon WoW that provides visual, auditory and textual notifications on cooldown, buff and practically every other combat element. TellMeWhen is. Flexible icons can monitor any of the following: Cooldowns Buffs/Debuffs Reactive Capacity Temporary weapon envelops Totems Rune cooldowns Whole refreshments Other refreshments Diminishing returns Spell casts . And any combination of over 110 other things with easy to use conditions. Customizable icons can be set to show or hide based on the status of their basic element and their usability based on range, duration, stack andAll icons can show the standard animation of cooldown to display their status and are compatible with OmniCC. There are over 110 conditions that can be configured to make an icon exhibition only under very specific or very general circumstances. You can set a sound to play when important attributes of an icon change. You can also set the text to announce/display when the attributes of an icon change. Icons can show at different levels of transparency based on usability/existence of what they are controlling. The icons can show the status bars above them, indicating the required resources and their remaining cooldown/duration differently. Icons can be skinned with Masque (ex ButtonFacade). Instructions to lock and unlock TellMeWhen, type "/tmw" or "/tellmeWhen". When you first access with TellMeWhen installed, you will see a group of four icons in the center of the screen. To start using TellMeWhen, right-click one of these icons and the icon editor will appear. You need to select a type of icon from the drop-down menu and enable the icon, then configure the icon to meet your needs according to the available settings. An explanation of what most settings can be found in the tip of the displayed tools when you tap on a setting. You can also drag spells from your spell book, from your spell book, or items from your inventory to quickly set a cooldown icon for that spell/object. The icons can be manipulated spatially by holding the right mouse button and dragging themWhen released on another icon, a menu will be displayed asking you what you want to do with the icon - Options include Move, Copy and Swap. General settings can be accessed through '/tmw options', Blizzard interface options, or the 'Group Settings' tab of the icon editor. All available slash commands are: '/tmw' - Toggles TellMeWhen between locked (functional) or unlocked (configuration). '/tmw options' - Opens general settings for TellMeWhen. '/tmw profile "Profile Name"' - Upload a TellMeWhen profile. The profile name is sensitive to the case and should be mentioned if it contains spaces. (e.g. '/tmw profile "Cybeloras - Aerie Peak)'). '/tmw enable globalprofile groupID iconID' - Enable the specified group or icon (e.g. '/tmw enable 2 4' or '/tmw enable global 3'). '/tmw disable globalprofile groupID iconID' - disabled the specified group or icon (e.g. '/tmw disabled profile 2 4' or '/tmw disabled 3'). '/tmw toggle globalprofile groupID iconID' - Activates the specified group or icon between enabled and disabled (e.g. '/tmw toggle global 2 4' or '/tmw toggle profile 3'). '/tmw cpu' - Allows and displays a user interface for the performance measurement of the icon. This is an advanced function; no data reading guide will be offered. Conditions are a very powerful feature of TellMeWhen that allows you to narrow down the circumstances where an icon or group must show. To configure the conditions for an icon, click on the Status tab of the Editor Icon. Conditionscheck out a wide range of things, and I recommend you explore the condition type menu to see what is available. You can add multiple conditions to an icon, and you can group different conditions together for use with Boolei E and O operators by clicking the brackets between each condition. The conditions are also used for other purposes throughout TellMeWhen. Meta icons Meta icons are another special feature of TellMeWhen that makes it so powerful and versatile. Meta icons allow you to specify a list of other icons to be checked within the meta icon, allowing you to have a large number of icons for different situations show in the same position on the screen. Concatenating the meta icons together Groups All TellMeWhen icons belong to a parent group. Each of these groups has many settings; some influence their appearance and size, while others affect their functionality. Options for a group can be accessed by typing "/tmw options", or by clicking on the group settings tab on the icon editor. Groups may also have conditions set to govern when they are shown and hidden - accessing through the Group Terms tab of the icon editor, they are configured exactly the same as the conditions of the icon. PLEASE DIRECT ALL FEEDBACK/BUGS/SUGGESTIONS Problems Resolution here Make sure TellMeWhen is not in configuration mode. Type '/tmw' to turn on and off the configuration mode. The most common problem that people encounter is caused by not entering the name correctly during configuration. Make sure youEnter the EXACTLY names as they are called when you mouse over them. For buffs this is often different from the ability/totem/trinket/enchant/talent that launches the buff, so make sure to check. The known buffs and debuffs are shown as a dark purple or a brown warrior color in the list of tips. If the skill name is not working properly, use the SpellID. Spectacle ID can be found by looking at the list of tips that opens while you start typing in the name, or finding the ability on a site like Wowhead. Orthography is in the url, for example: classic.wowhead.com/spell=53351 Checks the icon group settings. Check the icon settings in the other icon editor tabs. Donations If you like to use TellMeWhen or if you have helped considerably your game, please consider giving so that I can afford time to develop new features. Click the button below to securely donate via PayPal. Thank you! TellMeWhen is also looking for people who are well diversified in both English and German, Russian, Korean, French or Portuguese to contribute to translations! If interested, you can start translating here, or give me a hand if you have any questions. Thank you! You!
