Knowing how to make a dark video visible is essential for creating top-notch media content. If the brightness of your clip is too low, your viewers may not notice some important details.By mastering video editing techniques to enhance dark videos, you can elevate the overall quality of your films and captivate your audience.In this detailed guide, we'll walk you through the step-by-step process of how to adjust the video brightness with a popular Windows video editing software. Whether you're a video editing beginner or an experienced multimedia producer, you'll learn how to change the color settings to transform your dimly lit clips into high-quality content.Why is my video dark?If you've ever recorded a video on your phone or professional camera, you may have encountered the frustrating issue of it coming out too dark. But why does this happen?There are a few possible reasons why you may have low video brightness.Improper lightingInsufficient lighting is a common issue that results in having a video that looks too dark. If your scene lacks proper illumination, the camera sensor struggles to capture enough light.This can occur indoors when not enough lamps are turned on or outdoors during twilight or nighttime.Camera settingsWrong video recording parameters on the camera itself can also lead to dark footage. For example, if the ISO is too low, the sensor doesnt pick up enough light.Similarly, a high shutter speed or small aperture can reduce the amount of light hitting the sensor.To avoid dim videos in the future, make sure these settings are properly adjusted before you start shooting.Fortunately, there are some easy fixes to brighten dim videos after they were filmed. You can try increasing the exposure in a video editing software. Let's see how to do it.How to make a video brighter?If you have some footage that turned out to be too dark, don't worry, there is still something you can do to lighten it. With the help of Icecream Video Editor, you can easily brighten your clip and make it look more vibrant and appealing.Set up and install the video editorDownload free Windows video editor on your PC. Open the .exe file and follow the on-screen instructions to install the video editing app on your computer. Video Editor Powerful video editor to tune up your media content. All the most popular features (crop, rotate, merge, video effects, trim, etc.) at your service. Import filesClick the "Add Video" button to upload the footage you wish to brighten. Browse your files, select the video, and hit "Open".Drag the imported clip from the media library and drop it onto the timeline at the bottom of the screen.Brighten the videoClick on the video in the timeline to ensure its selected for editing. Locate the "General" button. This will open the "Scene settings" menu.Increase "Brightness" until you're satisfied with the result. Also, see if changing "Contrast" and "Saturation" will positively contribute to the overall visual of the clip.Press "Done" to save the changes.Made additional changes (optional)With this video editor, you can also trim, crop your clip, add text or picture-in-picture, apply transition and background music, etc. Experiment with the tools to further enhance your footage.Save the resultTo save your edited video, click the "Export video" button. Choose your desired file format, FPS, and resolution. Select the location on your computer. Hit "Export" to finalize the process.Pros of using Icecream Video EditorThis free video editing software is a powerful program that can help enhance the clarity of dim footage. Easy to Use. Icecream Video Editor has a simple drag-and-drop interface, making it easy for anyone to use, even without prior media production experience.Brightness and Contrast Adjustment. The application allows you to adjust the video brightness and contrast settings, which can significantly improve the visibility of dark scenes.Color Correction Options. With a range of color correction tools, you can enrich the hue and saturation of your clips and make them pop.Overlay Effects. You can incorporate picture and video overlays like light leaks or lens flares to create a more captivating look.Multiple Output Formats. The video editing program allows you to choose the exporting format for your needs: MP4 or WebM. Video Editor Powerful video editor to tune up your media content. All the most popular features (crop, rotate, merge, video effects, trim, etc.) at your service. Tips on filming well-lit videosAre your videos turning out dark and hard to see? Don't worry, there are simple ways to prevent this and make your videos visible. Here are some tips to help you out:Check your lighting. Make sure the room is well-lit or use additional lighting sources.Adjust camera settings. Play around with the exposure and ISO settings to find the right balance.Avoid backlighting. Don't put a bright light source behind your subject as this action will make it appear dark.Use a reflector. If you're shooting outside, use a reflector to bounce light onto your scene.Clean your camera lens. The clarity of your video may be compromised by a dirty lens, so remember to keep it clean.Consider using a tripod. Shaky footage can also make your video appear darker, so use a tripod for stability.Edit and enhance. Employ video editing tools to fine-tune your clips.By adhering to these guidelines, you can avoid dark videos and enhance their visibility for your audience. Explore various techniques until you discover what is most effective for you. Exposure and white balanceExposure refers to the amount of light that hits the camera sensor during filming. If this parameter is too low, the video will appear dark, while overly high will cause the footage to be washed out or overly bright.If filming in low-light conditions, you may need to increase the exposure to make the video brighter.However, be cautious not to overexpose, as this can lead to loss of detail in bright areas, known as "blown-out highlights."White balance controls how colors appear in your video. Without proper adjusting, clips can have an unnatural color casttoo warm (yellow/orange) or too cool (blue)which can affect brightness perception.Each light source has a different color temperature. For example, daylight is 5,500K, while tungsten lights are around 3,200K. Setting the correct white balance according to the conditions ensures that your video maintains accurate colors.Many cameras have an automatic white balance (AWB) setting, but for more accurate control, you can manually adjust it.Remember, good lighting is key to creating high-quality content that is pleasant to watch. So don't let dim video brightness destroy your great shots take control and make them shine!Edit video brightness: FAQWhat is the best way to fix grainy or pixelated dark footage?To improve grainy, pixelated footage, utilize noise reduction tools and adjust brightness and contrast carefully. However, keep in mind that post-production techniques can reduce issues but can't fully recover very poor-quality footage.Is there a solution to brighten video areas that lack exposure?Yes, adjusting exposure, curves, and color balance can lighten underexposed parts. Selective brightening through masks and luminance adjustments targets dark areas without affecting the whole frame. However, excessive brightening might introduce noise.Can adding special effects help make a dark video more visible?Some effects can enhance visibility and artistic appeal in dark videos. Light flares, glows, and color grading can highlight and improve dark footage. But don't overuse these filters. Effects should enhance rather than overshadow the content.How can you reduce noise in low-light footage?It can be minimized with noise reduction features in professional video editing software. Additionally, shooting at a lower ISO or using a high-quality camera sensor helps produce cleaner results.Are there any filters that help improve video clarity in dim lighting?Yes, LUTs (Look-Up Tables) made for night-time or low-light conditions can also adjust contrast balance, revealing more detail.ConclusionEnhancing the visibility of dark video footage may appear challenging, but with the proper video editor, it can be accomplished with little effort.Icecream Video Editor will help you fix the brightness if your footage is too dark. With the provided guide, even inexperienced users will be able to complete the task. By following our tips, you can brighten dark videos and turn them into a clear and visually appealing masterpiece and avoid poorly lit footage in the future. Video Editor Powerful video editor to tune up your media content. All the most popular features (crop, rotate, merge, video effects, trim, etc.) at your service. Save \$36 USD \$ 6 per month, \$72 / yearcancel anytime Bring dull footage to life with effects and preset filters, but don't stop here. Impress your audience with slick video transitions that showcase your style and personality. Check out Flixier's transitions library and give your videos that extra charm with bouncy, fading, zooming, blurring, glitching, radial, pixelated, and other transitions. You can try to adjust each transition for free!To make your videos stand out on social media, you need to make visual edits or add filters to them it's a requirement of great digital content in today's world. But you don't need to download an app or pay for software - you can easily filter videos online using Kapwing's online editor.Kapwing's online video editor provides dozens of preset filters and also fine grained adjustments that will allow you to tweak the filtered content. What's more, once you have the perfect filter, you can do even more with your video before you export the finished product.Upload a video from your iPhone, Android, PC or Tablet, or paste a link to the video you would like to filter.Select one of our preset filters, or adjust your video manually by changing the brightness, contrast, saturation, and more. Click Apply Filter or Done Adjusting button to commit your changes.When you're ready to download, hit the Export button and give Kapwing some time to process your project. Once it's done, you can download your finished video or share it directly on social media.Discover even more features on KapwingGenerate and customizable captions that automatically sync to your video. Use our AI-powered tool to create a transcript of your video, and then customize your auto-synced subtitles to make them perfect for your content creation needs. Resize, swap out fonts, or add in professional animations and transitions - all your edits will instantly be applied to the entire video.Smart Cut automates your video editing process by detecting and removing silences from your video in a matter of seconds. You'll be saving hours of editing time and completing your rough cut faster than ever for talking head videos, recorded presentations, tutorials, vlogs, and more. Editing has never been so seamless.Repurpose videos faster and make them look more professional with our Resize Canvas feature! In just a few clicks, you can take a single video and adjust it to be the right size for every other platform, whether it's for TikTok, YouTube, Instagram, Twitter, LinkedIn, or somewhere else.With Kapwing's smart background removal tool, you can isolate people from the background of a video for free, without a green screen. All it takes is a few clicks. Upload your content, select the Remove Background tool, and use the preview to choose the threshold that best works for you.Enhance your projects audio in seconds with Kapwing. In one click, Clean Audio automatically removes background noise, corrects loudness, and helps reduce popping sounds in your audio and videos. To use it, simply upload a video or audio file, then select Clean Audio on the right side.Work with your team directly in Kapwing. Create and edit content, then send it to share and collaborate with your teammates. Make team workspaces, comment in the editor, and work on videos together in real time or asynchronously.Edit the length of your video clip by dragging the timeline handles or by using the Split tool. Its never been easier to cut out silences, rearrange clips, or adjust the length of your audio to fit your video.Kapwing's customizable waveforms let you bring your audio or podcast content to life. Our Waveform tool creates an automatically-generated, animated graph showing the frequency and amplitude of your audio over time. Choose between a classic waveform style and a stacked bars style to bring your own touch to your project.Make your content pop with image overlays, emojis, progress bars, and audio waveforms. Then simply resize and position them to customize your project. With unlimited overlays, the possibilities are endless.Browse hundreds of royalty-free images, GIFs, videos, sound effects, and music clips directly in our editor. Curate assets that will bring your project to life, then edit them the way you want to all in one place.Get inspired by hundreds of trendy video templates made to unleash your creativity. Select the template that best suits your project, and then make it your own with custom videos, images, or text. Making professionally designed videos or memes has never been faster.There is a set of filters built into the iPhone and iPad photos app. Open Photos, find the video, and click Edit. Then, use the third icon to try out different filters on your video and save. Later, you can always revert your video file if you want to return it to normal. Alternatively, you can use a GIF editor like Kapwing to add filters, effects, overlays, and animations on your video.Filters are generally burned directly into the video as an MP4, so its not possible to remove the filter from the video. Creators can try to put a new filter on the video that reverses the previous edits, like increasing the saturation of a video that previously had the saturation lowered. If you share the video link using an online or collaborative editor, you can edit it, remove the filter, and collaborate with others.Start creating immediately with thousands of templates and copyright free videos, images, music, and GIFs. Repurpose content from the internet by pasting a link.Kapwing is completely free to start. Just upload a video and start editing. Supercharge your editing workflow with our powerful online tools.Automatically subtitle and translate videos with our AI-powered Subtilder tool. Caption your videos in seconds, so that no viewers get left behind.Kapwing is cloud based, which means your videos are wherever you are.
