

I'm not a robot

Released March 21, 2021 An update is highly recommended in order not to lose your files due to malicious scripts! Precedents have already been! Improved support virtual spaces. Fixed bugs in the Lua implementation. Updated translations. 211,637,165 Overview:Play games your way! GameGuardian is a game cheat / hack / alteration tool. With it, you can modify money, HP, SP, and much more. You can enjoy the fun part of a game without suffering from its unseasonable design. Requires Android:2.3.3+ GameGuardian Features Summary Runs on ARM, x64and x86 devices, including x86 emulators (LDPlayer, Droid4X, MOMO, KOPlayer, Andy, Memu, Leapdroid, AMIDuOS, Windroye, RemixOS, PhoenixOS, AVD, Genymotion, Nox, BlueStacks etc.) Supports Android 2.3.3+(Gingerbread) through Lollipop (5+), Marshmallow (6+), Nougat (7+), Oreo (8+), Pie (9+), 10+. Support work without root via different virtual spaces. Support different emulators like PPSSPP, ePSXe, GameBoy etc. Game deceleration and acceleration (speedhack) for ARM and x86 devices, including x86 emulators. Also supports both 32-bit and 64-bit applications on 64-bit devices usingspeedhack. Search feature: encrypted values. Search of unknown values when specifying the difference between values. Search addresses by mask. Explicit and "fuzzy" numeric searches. Text (String, Hex, AoB) search. Supports: Double, Float, Qword, Dword, XOR, Word, Byte, or Auto data-type searches. Lua scripting support. Modify all search results at once. Filtering of search results (address greater than and less than, value greater than and less than). Search in the background feature. 'The fill' feature. Time jump feature. Dump memory. Copy memory. Customizable UI. App localefor over 50 languages. And, much, much more. Notes: ** ROOT or VIRTUALENVIRONMENT ONLY ** This tool only works on rooted devices or in virtual environment (without root in limited mode)! GG can work in limited mode without root, through a virtual environment. For example, through Parallel Space, VirtualXposed, Parallel Space Lite, GO multiple, 2Face and many others. Read the help for more details. You can find more information about rooting your device at XDA Developers. Want to help us improve, or add atranslation? Then please visit thread "If you want to add a new translation or improve an existing". If you are having issues with the app, please visit thread "Gathering information about GG errors". Want to donate and help keep the project going? That's awesome! You can donate any amount (anything helps) here: Donate Need help with how to use this application? Please visit "Video tutorials" and forum "Guides". Download GameGuardian APK 101.1 Welcome to the GameGuardian Scripting Documentation.You can use scripts to program various hacks in the GameGuardian.This reference documentation describes the classes and functions that can occur and be used in GameGuardian scripts.You can discuss about this on our forums: do I get started?For getting started with scripting, the "learning-by-doing" approach often works very well, because it's fast and fun.Start by studying and modifying the scripts that can be download from our site, or take them as starting points for your own work.Experimenting with working scripts will make it easy for you to understand the underlying key ideas and concepts. Then come back here and read the documentation as required.You may also want to have a look at the Lua documentation and/or start asking questions at the GameGuardian forums.How to make the simplest script, you can read on a special page: How to write a simple scriptList all API methodsYou can list all methods of a gg table using this code: They are all described on the corresponding page: ggAdditional Resources of Information Home GameGuardian Guides Game Guardian tutorials - GameCheetah.org Home GameGuardian Guides Game Guardian tutorials - GameCheetah.org 211,637,172 Overview:Play games your way! Download GameGuardian APK 101.1 Hey guys, I want to modify the game files of a game, now the game is perfectly modifiable either by patching it with LP and getting free purchases or by simply modifying the values from GG But my problem is, when I modify these values using file explorers like ES File Explorer and find the values of my Gems and edit them to 9999, and when I open the game, it somehow detects that I have done something and it resets my ID as if it is a new account and erases all my game data and starts from beginning , this doesn't happen when using LP or GG but through simple file editing it happens, I have even tried changing the modified time of the file back to the original when it was modified by the game, and it still recognises that I have done something and resets my progress Now, why I want to do it through file system is, I have a new ID and in the game files there are certain codes or numbers attached to game items and in order to get those old items in my new account or remove something from my account I thought to change the number in the files of the app, but whenever I try to change something my progress is reset, even I change something and then undo it and save the file to what exactly how it was before, the game still recognises I have done something and resets So please help if there is a way to do this easily through GG, either by editing the files through GG so the game doesn't recognise it like it doesn't recognise when I edit the gems/coins directly Or tell me a method through GG by which I can claim or unclaim certain items of the game by finding out their address hex code or whatever Home GameGuardian Guides Game Guardian: Android 14 Home GameGuardian Guides Game Guardian: Android 14 211,637,165 Overview:Play games your way!
